Attacks on Health Care in the occupied Palestinian territory

29 October-11 November 2025

Recorded Violence Against Health Care in the oPt, 07 October 2023-28 October 2025

	 REPORTED INCIDENTS	 HEALTH WORKERS KILLED	 INCIDENTS WHERE HEALTH FACILITIES WERE DAMAGED	 HEALTH WORKERS ARRESTED
Gaza	2152	739	418	362
West Bank	789	12	27	161

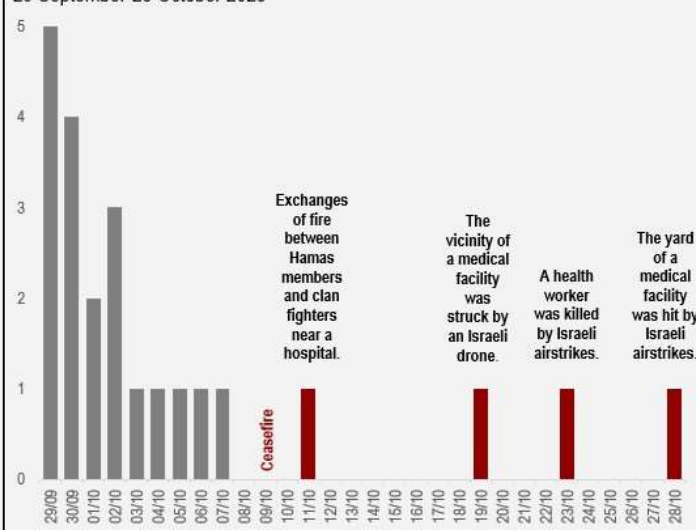

Insecurity Insight identified 3001 incidents of violence against or obstruction of access to health care in the occupied Palestinian territory between 07 October 2023 and 28 October 2025.¹ Over 95% of these incidents were attributed to Israeli forces. In Gaza, where 2152 incidents were recorded, health facilities were damaged 418 times, 739 health workers were killed and 362 arrested.² In the West Bank and East Jerusalem, where 789 attacks on health care were recorded, access to medicine was obstructed over 500 times, 12 health workers were killed and 161 arrested.

Since the 9 October 2025 ceasefire agreement between the Israeli government and Hamas, violence by conflict parties has continued to impact health care. Israeli airstrikes hit the backyard of Al-Shifa Hospital in Gaza city, located beyond the yellow-demarkation line of Israeli withdrawal. In Khan Yunis governorate, a laboratory specialist was killed in Israeli airstrikes in the Bani Suheila area. Exchanges of fire between Hamas members and clan fighters near the Jordanian Hospital in Khan Yunis city reportedly killed at least 27 people. As half of Khan Yunis governorate remains under Israeli control and presence of soldiers is dynamic, it is unclear whether at the time of the incidents in Bani Suheila and near the Jordanian Hospital, the areas were inside or outside the Israeli-controlled zone.

“We Lost Everything” The Impact of Conflict on Farmers and Food Security in Lebanon

Action Against Hunger, Insecurity Insight, and Oxfam have worked collectively to document the impact of Israeli attacks on water infrastructure and food security in Lebanon between October 2023 and April 2025. The report focuses on the impact of the escalation of conflict since October 2023 on farmers and food security in Lebanon, and complements the report **When Bombs Turn the Taps Off**: The Impact of Conflict on Water Infrastructure in Lebanon. Based on key informant interviews across South, Nabatieh, Bekaa and Baalbek-Hermel governorates; satellite imagery analysis; in-country partner contributions; and the remote monitoring of online sources, the research shows the following:

Damage to and destruction of agricultural land and food production assets

- Israeli attacks have extensively damaged or destroyed agricultural land in southern Lebanon. The attacks were especially intense during the period of Israeli forces' ground invasion in late September 2024.
- Large-scale fires affecting agricultural land caused by the use of explosive weapons and white phosphorus munitions were frequently reported.
- Farmers repeatedly expressed concern about the contamination of their agricultural land with explosive remnants of war (ERW) and white phosphorus munitions.
- Farmers in heavily conflicted areas of southern Lebanon and Bekaa have suffered multidimensional losses, affecting land, homes, livestock, and agricultural assets. **Read the full report.**

The Safeguarding Health in Conflict Coalition (SHCC) identified **418 incidents** of violence against or obstruction of health care in the West Bank in 2024., double the 208 reported in 2023. Most were attributed to Israeli forces. On seven occasions, Israeli settlers damaged ambulances by firing or throwing rocks at them. In one incident, an ambulance was stopped and attacked by a group of Israeli settlers while transporting a patient to a nearby hospital. The ambulance driver and a doctor were beaten during the attack. In December 2024, Palestinian National Security Forces were implicated in five incidents in Jenin refugee camp during a large-scale operation, damaging health facilities, surrounding and storming hospitals, searching ambulances, and arresting patients. **Read the full factsheet in Arabic and English. Download the data.**

This document comprises threats and violence as well as protests and other events affecting the delivery of and access to health care. It is part of the **Attacks on Health Care** project by **Insecurity Insight**. It is prepared from information available in local, national and international news outlets and online databases. The incidents reported are not a complete nor a representative list of all events that affected the provision of health care and have not been verified through ground investigations.

¹ 60 incidents were recorded without specifying the location and no additional source could be identified to determine the location of the reported incident.

² 719 is based on the number of health workers killed where location and date have been identified. Other sources have reported **1,173 workers killed**. Insecurity Insight carries out cross-checking of individual events and names and does not re-report aggregate figures. The work of collating a complete list of health workers killed based on information provided in different formats by different organisations is ongoing. This cross-checking process is complex to avoid double counting the same individuals in cases when sources report different victim information about the same individual. The lack of a consistent standard in transcribing Arab names into Latin script-based languages complicates the matching process. The total number of health workers killed is believed to be higher than the current verified number and we continue to backdate information.
