Syria – Access to medication and treatment in Damascus, Rural Damascus, Aleppo, Latakia and Homs

This report is not, and does not purport to be, a detailed or comprehensive survey of all aspects of the issues addressed. It should thus be weighed against other country of origin information available on the topic.

The report at hand does not include any policy recommendations. The information does not necessarily reflect the opinion of the Danish Immigration Service.

Furthermore, this report is not conclusive as to the determination or merit of any particular claim to refugee status or asylum. Terminology used should not be regarded as indicative of a particular legal position.

Introduction

Purpose of report and methodology

The purpose of this report is to present updated and reliable information on the accessibility of health care services in five governorates of the Syrian Arab Republic - Damascus, Rural Damascus, Aleppo, Homs and Latakia. The report focuses on access to medicines and to specialised treatment, which means that information about basic health services is not included. The scope of the report is the Syrian health care system; therefore, information on UNRWA operated health centres has not been part of the research.

The Country of Origin Information (COI) Division of the Danish Immigration Service (DIS) has initiated the present report to respond to the need for updated COI at a moment where there is little knowledge about medicines and specialised treatment in Syria. The European Union Agency for Asylum's (EUAA) sector for medical background information¹ has had no reliable provider to obtain information on access to medicines and treatment in Syria,² and has only recently published brief reports on availability of psychiatric medicines and treatment in Damascus³ and in Aleppo, on cardiovascular diseases and about the various treatments and medicines for diabetes.⁴ As these brief reports do not include prices for treatment and medicines and only cover psychiatry, the need for additional information remains. This report contributes to address this lack of information.

Terms of reference

The terms of reference (ToR) of the present report have been developed by DIS with inputs by the Secretariat of the Danish Refugee Appeals Board, the Ministry of Immigration and Integration, the Danish Return Agency and the Asylum Division of DIS. Based on these inputs, the ToR has been focused on the following chronic diseases and medical conditions:

1. Mental health
2. Cancer
3. Cardiac complications and hypertension
4. Diabetes type I and II
5. Haematological diseases
6. Kidney diseases, including dialysis
7. Rheumatic diseases
8. HIV/AIDS
9. Chronic obstructive lung disease

¹ EUAA MedCOI is a service for national asylum authorities that collects medical information from countries and regions of origin of asylum applicants for use by first-instance migration authorities in the EU+ countries, EUAA MedCOI, About MedCOI, n.d., [url](#)

² MedCOI, AVA 19243, 07/04/2025

³ MedCOI, AVA 19788, 21/02/2025

⁴ MedCOI, AVA 20015, 14/01/2026; AVA 20245, 26/02/2026; AVA 20244, 19/02/2026

The ToR is available in Annex 1.

Following guidance by the ToR, data has been collected about specific treatments and medicines within the five selected governorates of Syria.

Specifically, the data collection focused on two topics:

- Availability and accessibility of specialised treatment, including outpatient and inpatient services, laboratory testing, medical devices equipment and respective pricing (in Syrian Pound). This involved examining whether the selected treatment is *fully available* in the health facility at the time of research or *available* in any capacity.
- Availability and accessibility based of a type of medicine, including generic name, brand name, form, dosage, quantity per package, and price (in Syrian pounds). The assessment examined the extent of supply availability, including whether a given medicine was: a) in *fully available* (i.e. stock levels were stable and the medicine was consistently available); b) *partially available* in cases of temporary supply interruptions (defined as a supply disruption lasting from a few weeks up to one year); or c) *not available* (i.e. supply had been discontinued for more than one year and ordering from abroad was not possible).

Locations of data collection

The Secretariat of the Danish Refugee Appeals Board and the Asylum Division of DIS identified the five locations in the Syrian Arab Republic where health services should be surveyed: the governorates of Damascus, Rural Damascus, Aleppo, Homs and Latakia.

Time of data collection

Data collection was carried out in December 2025 in the five governorates. Additional data collection for psychiatry was carried out in Aleppo in January 2026 and for cancer treatment in Damascus in February 2026.

Data collection methodology

The report is based on data collected via a survey conducted in selected health facilities by an independent consultancy company, Tana-EHG, which was selected in a competitive, open process by DIS. Tana-EHG has extensive experience in working with health system analysis, including in the Middle East.⁵ Tana-EHG was able to form a gender-balanced list of national experts to carry out the research in Syria and had already demonstrated expertise in similar assignments.

Based on an extensive list of medicines and treatments provided by DIS and based on EUAA MedCOI's guidelines, a survey was designed by Tana-EHG. The Tana-EHG research team

⁵ Tana-EHG, *References*, n.d., [url](#)

engaged with the Syrian Ministry of Health in order to establish a shortlist of health facilities in the five governorates. Based on this contact, 27 facilities (5-6 per governorate) were identified according to minimum criteria: at least 1-2 public government hospitals/health centres, one private hospital, one specialised health facility and one independent pharmacy facility not attached to a health facility. For a list of the surveyed health facilities, please see Annex 2.

The research team coordinated with the Ministry of Health and the Health Directorates of the governorates, securing formal approvals to facilitate efficient data collection without operational challenges.

Five research teams, composed of two doctors from each of the five governorates, were established and trained by Tana-EHG in survey methodologies for this specific assignment. The research teams each visited health facilities in their catchment areas and spoke directly with hospital directors, facility managers, and pharmacy focal points within hospitals and health centres to ensure that information was obtained from authoritative and knowledgeable sources. Where required, supporting documentation was reviewed to validate the information provided.

Quality assurance

To strengthen data reliability, a third doctor identified by Tana-EHG conducted follow-up verification visits to the same facilities to cross-check and confirm the collected information. Upon completion of fieldwork, all completed forms were consolidated and shared with the quality assurance supervisor who was responsible for transferring the data into the required template, cleaning and validating the datasets, resolving inconsistencies, and ensuring completeness and accuracy prior to final submission. Finally, Tana-EHG was responsible for clarifying inconsistencies based on inputs from DIS and validating overall data quality.

After the completion of the data collection, additional information was collected from other health facilities to fill in gap areas. During data collection, DIS was in contact with EUAA MedCOI to compare findings with EUAA's first availability reports from Damascus and Aleppo and to identify any possible inconsistencies.

Report structure and content

The report was written in alignment with the methodology of EUAA-MedCOI's standards for medical COI.⁶

The report presents the results by governorate and by disease/condition in separate chapters. The full report by Tana-EHG, including the research teams' field observations, can be found in Annex 3.

Medical Country of Origin information (MedCOI) from Syria

The purpose of this research is to gather information about the accessibility of medicines and specialised treatment in Syria for nine specific diseases and health conditions.

Diseases and health conditions included:

10. Mental health
11. Cancer
12. Cardiac complications and hypertension
13. Diabetes type I and II
14. Haematological diseases
15. Kidney diseases, including dialysis
16. Rheumatic diseases
17. HIV/AIDS
18. Chronic obstructive lung disease

Geographical focus: health facilities (hospitals and pharmacies) in Damascus, Rural Damascus, Aleppo, Homs and Latakia.

Methodology

Availability of any medication is defined as:

Whether a given medicine is in *full supply* at the selected health facility at the time of research; *partially available* because the requested medicine is experiencing a temporary interruption in supply; or *completely Not available*, or supply has been cut off for more than one year.

Accessibility will be defined as: price of product (medicine, device, treatment or service).

1 INTRODUCTION

This is a health assessment report on the **Medical Country of Origin Information (MedCOI) - Syria**, as commissioned by the Danish Immigration Service (DIS), Centre for Documentation and Counter Extremism (CDE), Country of Origin unit. This study was conducted in December 2025 by the Tana Copenhagen-Euro Health Group (Tana-EHG)¹, supported by Syria-based partner, Everest MERL Syria. This study builds on the 2020 MedCOI health assessment report, for purposes of updating the records as per current status.

2 OBJECTIVE AND SCOPE

Following guidance by the Terms of Reference (ToR), the MedCOI assessment examined nine diseases and medical conditions affecting the Syrian population and investigated the extent of availability and accessibility of specific treatments and medications within Syria's five governorates.

Specifically, the assessment focused on two main research areas:

- 1) Availability and accessibility of the specialised treatment, including outpatient and inpatient services, laboratory testing, speciality treatments and equipment and respective pricing (in Syrian Pound). This involved examining whether the selected treatment is *fully available* in the health facility at the time of research or *entirely not available* in any capacity.
- 2) Availability and accessibility on a basic profile of a type of medicine, including generic names brand name, form, dosage, quantity per packaging and pricing (in Syrian Pound). The assessment investigated the extent of available supply including a) whether a given medicine is in *full supply* (stock is in stable supply and always presently available) b) *partially available* in the case of a temporary interruption in supply (in this case, we will consider a supply pause ranging from a few weeks to one year); or c) *completely not available*, (where supply has been cut off for more than one year and ordering from abroad not possible).

Notably, the list of diseases that formed the basis of enquiry comprised of:

1. Mental health
2. Cancer
3. Cardiac complications and hypertension
4. Diabetes type I and II
5. Haematological diseases
6. Kidney diseases, including dialysis
7. Rheumatic diseases
8. HIV/AIDS
9. Chronic obstructive lung disease

Syria as a whole is divided into 14 governorates (provinces). For this assessment, the focus limited its geographical scope to five governorates including **Damascus, and Rural Damascus (Riff), Aleppo, Homs and Latakia**. These are locations that either have proximity to the capital city (Damascus), are host to a large population, or are significant in terms of size.

¹ <https://www.tana-ehg.com>

3 METHODOLOGY

Planning stage: At the onset, the research team engaged with the Ministry of Health to provide guidance in the selection of appropriate facilities within 5 governorate locations. A list of 27 facilities (5-6 per governorate) was identified, based on a minimum criteria of at least **1-2 public/government hospitals² or health centres³, 1 private hospital, 1 speciality centre and 1 independent pharmacy facility (not attached to a health facility)** – see **Table 1** below. In the Syrian context, majority of the national hospitals and speciality centres are mainly state-run and easily accessible to the wider public because of the subsidised services offered in most cases. To offer a comparison lens especially into cost-pricing, the assessment also included privately-managed facilities. Across the board, the strategy was to prioritise facilities that target low-income and underserved communities including migration populations (refugees, asylum-seekers and internally displaced persons).

Coordination was conducted with the Ministry of Health and the Health Directorates at the Governorates to secure formal approvals and enable efficient data collection without operational challenges.

In selection of the field teams, the assessment engaged two doctors (one female and one male) from each of the five governorates, based on their vast local experience and established working relationships with hospitals and health centres. This approach facilitated smooth access and cooperation at the facility level. These research teams were then taken through training to prepare for data collection. The field teams received rapid, targeted training on the data collection tools and formats, including guidance on accurate completion, appropriate communication protocols, ethical engagement with facility staff, and procedures to follow in the event of any security-related issues. Tools were also translated into Arabic to facilitate data accuracy (where necessary).

Data collection: Each field team conducted on-site data collection using printed forms to ensure accuracy and minimise recall errors. Data was primarily collected through direct engagement with hospital directors, facility managers, and pharmacy focal points within hospitals and health centres, ensuring that information was obtained from authoritative and knowledgeable sources. Where required, supporting documentation was reviewed to validate the information provided.

To strengthen data reliability, a third doctor conducted follow-up verification visits to the same facilities to cross-check and confirm the collected information. Upon completion of fieldwork, all completed forms were consolidated and shared with the Quality Assurance (QA) supervisor. The QA was responsible for transferring the data into the required template, cleaning and validating the datasets, resolving inconsistencies, and ensuring completeness and accuracy prior to final submission.

Specialty center	Karam Al-Louz Oncology Center	+963 312 759 180
Pharmacy (independent)	Abeer Al-Ahmad Pharmacy	-

Reporting: following data entry, the data was then synthesised and reported into the required templates (DIS guidance). Additional quality assurance was conducted at this level to fill in the gap areas, clarify inconsistencies, and validate overall quality. The data is presented in section 5 below.

4 GENERAL FIELD OBSERVATIONS⁷

- A number of the public hospitals, health centres/clinics, specialized centers, offer free or subsidised treatments and medications for a majority of the diseases. These facilities provide entirely free services subject to availability of medication and resources.
- Generally, there are limited specialized centers for treating immunodeficiency diseases, largely due to the surrounding social stigma. Many patients avoid such facilities out of fear of being judged by society. Care of such diseases is managed confidentially within facilities because of the sensitive nature of the disease and the many social complications associated with it.
- HIV/AIDS treatment and medication is generally limited. In this assessment, observable facilities offering care can be found in private facilities in Aleppo, Latakia and Homs. None was found in Damascus. These private facilities in Aleppo, Latakia and Homs focus mainly on

⁵ www.auh.edu.sy

⁶ <https://homs-hospital.edu.sy/>

⁷ Some of the information noted here reflect anecdotal observations rather than findings formally captured in this research process.

offering consultations with HIV/AIDS specialists and to an extent laboratory testing of CD4 count and viral load. Public facilities on the other hand primarily handle initial HIV/AIDS case screening and registration. Across country, all cases are referred to the National Center for Infectious Diseases in Damascus for enrolment into the national HIV/AIDS programme. Zahi Azraq Hospital in Aleppo is a key facility through which enrollment into the national programme is facilitated.

- Antiretroviral medications are not routinely stocked at both private and public facilities. This function is mainly managed by the national programme, through the National Centre for Combating HIV/AIDS and rolled out through dedicated specialist centres such as Al-Khalidiya Health Centre in Damascus.
- Psychosocial support services do not exist as independent centers across Syria, apart of NGO-based centers. When available, the primary purpose is to improve the morale of cancer patients and individuals with chronic disabilities.
- Mental health treatment does exist; however, it is offered as a department within hospitals rather than as standalone centers. A majority of the psychiatric medications are not present in these health facilities. Specialized hospitals for mental health and psychiatric support exist only in Aleppo and Damascus.
- Most patients suffering from common colds or influenza tend to seek treatment directly from pharmacies rather than visiting physicians, and in many cases they receive injectable medications without seeking proper medical consultation.
- A significant number of individuals working in pharmacies do not hold university degrees; instead, some operate by renting a pharmacist's license.
- The Syrian medication system in public hospitals lacks flexibility and relies on restricted drug groups. Many of the medications listed in this assessment are either less aligned with nationally adopted treatment guidelines or are not adequately available, even in private pharmacies.
- Specialised oncology centres in Damascus, Aleppo, Homs and Latakia offer oncologist services, laboratory testing and a limited range of medications and therapies for cancer treatment.

5 AVAILABILITY AND ACCESSIBILITY PER GOVERNORATE

5.1 DAMASCUS

5.1.1 Diabetes: Cost of Treatment (SYP)
