Key Figures

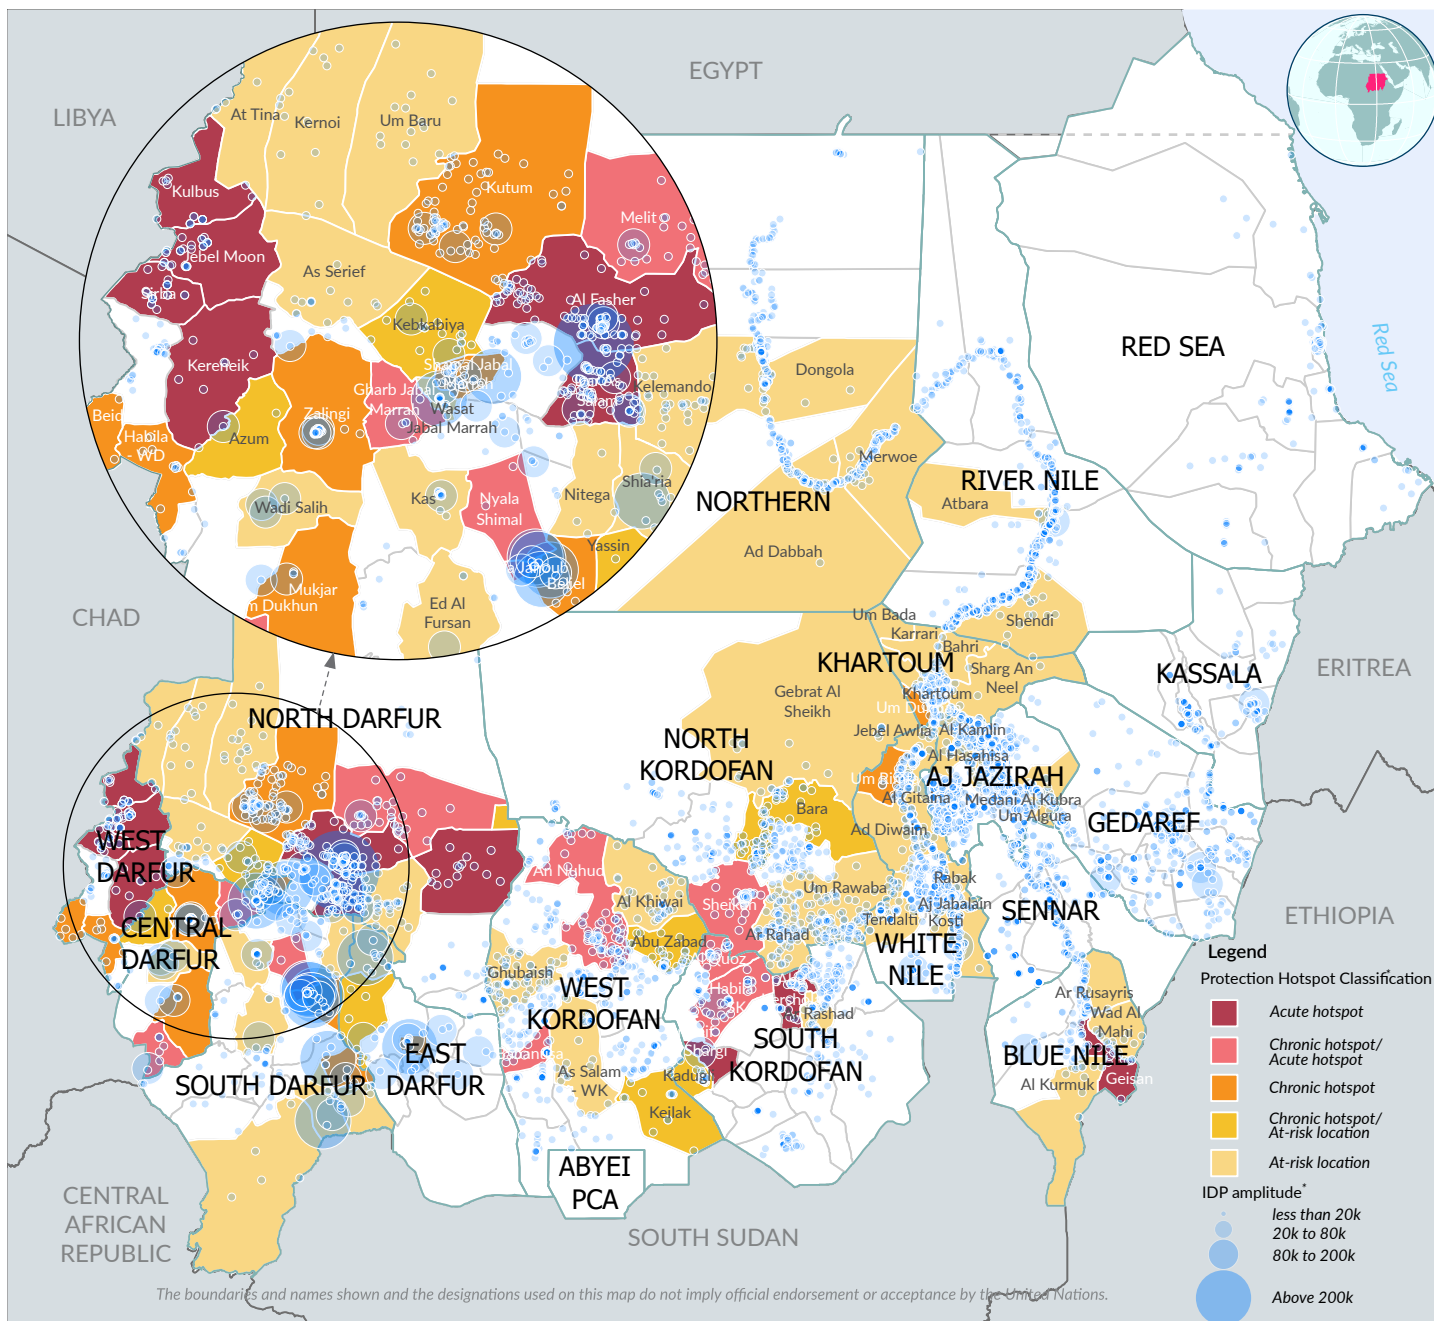

Number of Hotspots Sites and Localities per State

The Protection Sector hotspot mapping identifies conflict and at-risk areas to provide early warning and inform preventative and response action. The mapping distinguishes between (1) chronic conflict hotspots – areas that are affected by prolonged, protracted and/or repeated inter-communal violence, armed attacks and low intensity conflict (2) acute conflict hotspots – areas that are currently affected by new violence, armed attacks or active armed conflict and (3) at-risk locations – location that are at risk of inter-communal violence or armed conflict in the near future, and/or where civilians are at risk of attacks.

* IOM DTM, Sudan - Countrywide Mobility Update 16 (Bi-Weekly), March 2025

** The highest settlement classification is applied for mapping at the locality level.
