Development of conflict incidents from 2015 to 2024

This graph is based on data from ACLED (datasets used: [ACLED](#), 31 January 2025).

Methodology

The data used in this report was collected by the Armed Conflict Location & Event Data Project (ACLED). Based on a variety of sources, ACLED collects data on reported conflict events around the world and provides publicly available event-based datasets. ACLED data contains information on the event type, the date, location, involved actors, and other characteristics of the incident. Most of the data collected by ACLED is gathered based on publicly available reports. As information on fatalities is subject to bias and can vary between sources for the same event, ACLED employs “the most conservative and reliable fatality estimate available”. ACLED uses the reports’ context to estimate fatalities for events with reported fatalities for which the exact number is unknown (“3” or “10” for plural fatalities, depending on the context; “100” if “hundreds” are mentioned, etc.). For further details on ACLED and for the full data, see www.acleddata.com and [ACLED, 2023](#).

Based on this data, the Austrian Centre for Country of Origin & Asylum Research and Documentation (ACCORD) compiles updates on conflict incidents and publishes them on ecoi.net to offer another access point to the ACLED datasets.

It is advised to employ extreme caution when using fatality numbers.

Assessments of the security situation should not be based solely on quantitative analysis of event data.

Note: Data on incidents in the Abyei area are not included in this overview.

Geographic map data is primarily based on GADM, complemented with other sources if necessary. Incidents are mapped to GADM provinces using the provinces in ACLED data. Province names and borders may differ between ACLED and GADM. Incidents that could not be located are ignored. The numbers included in this overview might therefore differ from the original ACLED data. ACLED uses

varying degrees of geographic precision for the individual incidents, depending on what level of detail is reported. Thus, towns may represent the wider region in which an incident occurred, or the provincial capital may be used if only the province is known. Erroneous location data, especially due to identical place names, cannot be fully excluded.

Incidents comprise the following categories: battles, violence against civilians, remote violence, riots/protests, non-violent strategic activities. For details on these categories, please see

Localization of conflict incidents

Note: The following list is an overview of the incident data included in the ACLED dataset. More details are available in the actual dataset (date, location data, event

type, involved actors, information sources, etc.). The data's precision varies among the incidents: a town may represent a region, or the provincial capital may be used if the precise location of an incident is unknown. In the following list, the names of event locations are taken from ACLED, while the administrative region names are taken from GADM data (with the exception of Iraq) which serves as the basis for the maps above.

In **Al Jazirah**, 1306 incidents killing 3493 people were reported. Disclaimer

ACLED data undergoes several rounds of review before publication and is continually updated as new events are added and existing events are revised as new information becomes available. Updates in ACLED's datasets will not necessarily be reflected in ACCORD's reports if the update occurs close to or after the latter's publication. Changes in the sources used by ACLED to collect incident data might affect the comparability of data over time. For more information on ACCORD's products based on the data, please see the [ecoi.net blog posts tagged with "ACLED"](#). The lack of information on an event in this report does not permit the inference that it did not take place. The boundaries and names displayed do not imply endorsement or acceptance by the Austrian Red Cross.
