

HUMANITARIAN NEEDS OVERVIEW CAMEROON

HUMANITARIAN
PROGRAMME CYCLE
2020

ISSUED MARCH 2020

About

This document is consolidated by OCHA on behalf of the Humanitarian Country Team and partners. It provides a shared understanding of the crisis, including the most pressing humanitarian need and the estimated number of people who need assistance. It represents a consolidated evidence base and helps inform joint strategic response planning.

The designations employed and the presentation of material in the report do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

Get the latest updates

OCHA coordinates humanitarian action to ensure crisis-affected people receive the assistance and protection they need. It works to overcome obstacles that impede humanitarian assistance from reaching people affected by crises, and provides leadership in mobilizing assistance and resources on behalf of the humanitarian system.

Humanitarian RESPONSE

Humanitarian Response aims to be the central website for Information Management tools and services, enabling information exchange between clusters and IASC members operating within a protracted or sudden onset crisis.

www.humanitarianresponse.info/en/operations/cameroon

Humanitarian InSight supports decision-makers by giving them access to key humanitarian data. It provides the latest verified information on needs and delivery of the humanitarian response as well as financial contributions.

www.hum-insight.com

The Financial Tracking Service (FTS) is the primary provider of continuously updated data on global humanitarian funding, and is a major contributor to strategic decision making by highlighting gaps and priorities, thus contributing to effective, efficient and principled humanitarian assistance.

Overview map

The designations employed and the presentation of material in the report do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

Summary of Humanitarian Consequences

In 2020, 3.9 million people in Cameroon need humanitarian assistance. Eight out of the country's ten regions are impacted.

In the Far North, the Boko Haram insurgency, compounded by chronic vulnerability and the growing impact of climate change, has left 1 million people in need of urgent assistance. Cameroon is the second most-affected country in the Lake Chad Basin. 490,000 persons are displaced¹ and face significant protection risks. Local communities, whose pre-existing vulnerabilities have been exacerbated by these arrivals, the escalating violence and the disruption of livelihoods and basic social services, are also in need of support.

To the east, Cameroon continues to provide refuge to over 270,000 vulnerable refugees from the Central African Republic. Access to livelihoods, food, WASH services and education remains limited. Despite the signature of a tripartite agreement between the Central

African Republic (CAR), Cameroon and UNHCR, prospects for large-scale return are not immediate.

In November 2017, tensions in the North West and South West regions turned into violence with dramatic humanitarian consequences. Almost 680,000 Cameroonians are now internally displaced.² An additional 52,000 people have sought refuge in neighboring Nigeria.³ 80% of health and education services in the two regions are also non-functioning. IDPs and host communities, particularly in rural areas, need immediate protection, food, shelter/NFI, water and sanitation.

In these hard-hit areas of Cameroon, humanitarian needs are compounded by the chronic vulnerability of people, structures and services. Reversing the deepening inequality⁴ and growing fragility of the country through sustainable development and peace building efforts must go hand in hand with the humanitarian response.

Impact of the Crisis and Humanitarian Consequences

BUEA/SOUTH WEST REGION, CAMEROON

1.1

Context of the Crisis

Cameroon is affected by three, concurrent, complex humanitarian situations: Boko Haram violence in the Far North region; the influx of refugees from the Central African Republic into the eastern regions (Adamawa, North and East); violence in the North West and South West regions with spillover effects in the West and Littoral regions. Humanitarian needs are compounded by structural development deficits and chronic vulnerabilities that further challenge the long-term recovery of affected people.

Political, socio-cultural, demographic and economic profiles

The armed conflict in the Lake Chad Basin and the crisis in the North West and South West regions have significantly destabilized the socio-political environment in Cameroon. With a relatively diversified economy (agriculture, forestry, raw material extraction and some transformation industry) and a dynamic private sector, Cameroon's economic growth (around 3-4%) has been lagging behind.

In the Far North, particularly in the Lake Chad area, the economic context is marked by poverty, the lack of natural and financial resources and market opportunities, and a drastic reduction in agriculture, livestock and tourist activities due to prevalent insecurity.

In the North West and South West, on-going violence has had a major impact on the economy. Cultivable and grazing areas have been reduced more and more in recent years, due to demographic pressure, but also to insecurity and population displacement. Trade with neighboring countries, especially Nigeria, is becoming increasingly difficult.

Security environment

Insecurity is widespread in the Lake Chad region, due to incursions and attacks by non-state armed groups (by the Islamic State in the Lake area and further South by the group Jama'atu Ahlus-Sunnah Lidda'Awati Wal Jihad (JAS), also known as Boko Haram). The security situation has somewhat improved in the larger cities in the Far North with fewer suicide bombers. In the North West and South West regions, high levels of insecurity continue. The presence of national security structures - police, gendarmerie, army - is concentrated along the main roads and cities while non-state armed groups are more present in rural areas.

Other parts of Cameroon remain stable and offer relative security, therefore welcoming many refugees and internally displaced persons from other regions (including people from the North West and South West regions fleeing violence) and neighboring countries. However, there has been an increase in incidents including urban crime, kidnappings, the phenomenon of robbers and community clashes. Certain incidents such as kidnappings are mainly reported in the border area with CAR.

Existing legal and policy frameworks

Judicial services exist in the country however access to the judiciary system is challenging in remote areas affected by conflict and crisis. Traditional chiefdoms are auxiliaries to the administration and the justice system. The presence of the administration and of traditional authorities has been significantly affected by insecurity.

Infrastructure and technology

Cameroon has nearly 78,000 km of main roads, including 5,133 asphalted km, however particularly in the North this road network is severely degraded significantly impacting humanitarian access, especially in the rainy season. The electricity network remains very weak, the overall rate of household electrification is less than 15% and covers only a few localities. The telephone network excludes certain rural areas.

Environmental Profile

Cameroon is exposed to climatic hazards and natural disasters (low or high rainfall depending on the season and the regions), drought, floods, landslide, fire. The country is experiencing strong pressure on natural resources (wood, water, raffia palm groves, etc.) and mining. Bush fires, which are often used to clear plots of land during the dry season, are a major risk of environmental destruction. The rainy season also regularly causes damage to houses, crops and road infrastructure. About 80,000 people were affected by the floods in the Far North in November 2019. Pollution resulting from the exploitation of minerals and wood and the use of pesticides and insecticides in agriculture is increasing.

1.2

Impact of the Crisis

Far North

Cameroon is the most affected country by the conflict in the Lake Chad Basin, after Nigeria. Since the beginning of 2019, the Far North region has seen a sharp upsurge in violence. Ongoing hostilities have displaced 490,000 people⁵ (109,000 refugees, 271,000 IDPs and 110,000 returnees (50.2% women; 49.8% men; 62% children) and continue to steadily push more people to flee their villages. The number of IDPs increased from 228,000 in October 2018 to 271,000 in August 2019. The affected population is regularly subjected to armed attacks, kidnappings, including kidnapping of children, looting and destruction of property and infrastructure. Beyond the common perception that girls and women are the overwhelming majority of those facing security threats, both halves of the population are affected. While girls and women are particularly vulnerable due to the combined effect of gender discrimination and socio-economic vulnerability caused by the crisis, leading to specific threats against them (in particular gender-based violence), boys and men are more exposed to arbitrary arrests, forced recruitment and physical violence.

North West and South West

In the North West and South West, the socio-political crisis, now entering its fourth year, has led to massive population displacements, increasing the vulnerabilities of people who have often left their villages to live in the bush since the beginning of the crisis. As of August 2019, 450,000 internally displaced persons have been registered in the region, as well as 204,000 returnees. As of 31 December 2019, 52,000 Cameroonians are registered as refugees in Nigeria. The largest numbers of IDPs are registered in the divisions of Meme (SW), Mezam (NW), Ngo-Ketunjia (NW) and Fako (SW). 52% of the displaced are women. According to the latest Multi-Sectorial-Needs-Assessment (MSNA) (August 2019), 44.5% of IDPs are children (96,472 girls and 95,031 boys). It is also estimated that 200,000 have fled to the neighboring regions of Littoral and the West.

Adamawa, North and East

In the eastern and northern regions, Cameroon hosts 270,000 refugees from the Central African Republic (CAR), 51.5% of whom are girls and women. The influx of refugees is putting significant pressure on the already limited natural resources and basic social services in the host areas, exacerbating pre-existing vulnerabilities, particularly affecting women and children and single female-headed households. The gradual decline in humanitarian assistance and the insufficient level of funding for development projects further affect the vulnerabilities of refugees. Prospects for return to the Central African Republic remain uncertain, as the security situation continues to be unstable. There was, however, a plan for the voluntary return of 4,000 refugees in 2019 which was almost

achieved and 10,000 in 2020. As of 5 December, 2,808 refugees have been repatriated by UNHCR to CAR.

Impact on systems and services

Far North

The instability in the region continues to exacerbate the already limited access to basic social services, particularly with regard to the health and education system. Access has been further constrained due to widespread insecurity - leading inter alia to the flight of education and health personnel - the destruction of basic infrastructure, and the lack of health services present to deal with war injuries and psychosocial trauma related to violence, including sexual violence and rape. The lack of health facilities promotes the spread of epidemics such as cholera, polio and measles which are recurrent and particularly affect the weakest, children and the elderly.

North West and South West

The crisis in the North West and South West has had a major impact on the education sector. Over the past three years, insecurity, displacement of teachers, threats and attacks on infrastructure and education personnel have left 850,000 school-aged children out of school. In November 2019, 90% of public primary schools and 77% of public secondary schools remained closed or ceased to operate. It is estimated that in October 2019, 30,000 pupils were integrated into primary schools in neighboring regions (Littoral and Ouest), which resulted in an overload of the existing educational capacity in these regions, with classrooms of up to 200 children.

Attacks on medical personnel and infrastructure have become another feature of the crisis with the closure of more than 35% of all health facilities and many of the remaining not functioning at full capacity. As a result, maternal and child mortality rates have increased, and an average of only 12% of women give birth in health centers. Lack of access to contraceptive methods, combined with poor coverage of sexual and reproductive health services, lead to early pregnancy, unsafe abortion and sexually transmitted diseases. Children's nutritional status is deteriorating due to multiple health and food insecurity issues. Global Acute Malnutrition (GAM) in the South West is 7.3% and in North West 5%. Severe Acute Malnutrition (SAM) is 2.7% in the South West and 2.1% in the North West. People living with HIV who were on Antiretroviral (ARV) drugs can no longer access drugs when they take refuge in the bush, increasing the risk of infection.

People in rural or hard-to-reach areas are most affected due to limited or no access to basic medical services. This population is mainly composed of women and children. In terms of access to WASH

infrastructure, it should be noted that IDPs often share shelters, water points, latrines and showers with host populations. The increased proximity does not give girls and women the necessary privacy, exposing them to the risk of violence.

Adamawa, North and East

In the East, basic social services do not have the capacity to meet the demand of the entire population, including that of Central African refugees. Since the refugee's arrival, the existing centers, already few, have been overcrowded and are experiencing insufficient human and material resources. Extreme poverty prevents vulnerable people from paying the costs necessary for health care. Drinking water supply - in quantity and quality - remains precarious. In basic sanitation, the latrines are insufficient and insecure, with people favoring open defecation, resulting in poor personal and community hygiene practices.

Impact on humanitarian access

Far North

Humanitarian access to the North is severely restricted due to the prevailing insecurity and attacks by non-state armed groups which restrict the freedom of movement of goods and people as well as humanitarian actors. Humanitarian partners - mainly UN agencies - use government armed escorts in areas of particularly high danger in accordance with the principle of last resort. In addition, the poor conditions of the road network worsened during the rainy season, which is often severe in Cameroon, particularly so in 2019. In some cases, authorities required humanitarian actors to obtain written authorizations from the Governor for the implementation of humanitarian activities.

North West and South West

Access constraints identified in both regions include a number of logistical challenges (e.g terrain, poor infrastructure, network issues), challenges related to a lack of community acceptance (particularly around civil documentation and education), active hostilities, military operations and insecurity; restrictions of movements of humanitarian personnel, goods and assets within the country (e.g. ghost towns/ lockdowns, check-points, road blocks), and violence against humanitarian personnel (kidnapping, threats, etc.). Local NGOs, as 'frontline' responders are particularly affected. While both regions face the same type of constraints, the North West is significantly more impacted by these challenges and access is reported as more difficult to establish and maintain due to a more volatile and precarious security environment.

Access constraints often translate into delays, partial response to humanitarian needs and increased operational costs for humanitarian partners. In parallel, access to basic social services by the affected population remains a critical concern in the two regions as fear of violence and lack of civil documentation limits movements (especially for men of fighting age). Disrespect for the sanctity of health care services and disruption of education services is equally worrisome.

Authorities require humanitarian actors to obtain written authorizations from the Governor's office for the implementation of humanitarian activities, a process facilitated by the establishment of Government Humanitarian Coordination Centres (HCC) in Buea and Bamenda in June 2019.

Non-state armed groups have increased their presence in hard-to-reach areas, particularly in the North West. People in these regions find themselves cut-off from basic services and economic opportunities. Areas that were hard- to-reach before the crisis have become even more isolated, increasing their vulnerability. The weekly "ghost town" days, set up by non-state armed groups, particularly affect displaced persons and host communities, limiting their movements and therefore their economic and agricultural activities.

All humanitarian actors (United Nations agencies, local and international NGOs) must strengthen their ability to negotiate and maintain access to rural and bush areas through advocacy, programming and increased presence.

Adamawa, North and East

The Adamawa, North and East regions are relatively secure, allowing them to welcome many refugees and internally displaced persons. However, there has been an increase in incidents including urban crime, kidnapping, roadblocks by bandits, and inter-communal conflicts. Certain incidents such as kidnappings are mainly reported in the border area with CAR. Humanitarian actors are not deliberately targeted. Security incidents are not likely to have a significant impact on humanitarian access. The public authorities have increased the level of security in the Eastern region, thereby guaranteeing the movement of populations, even if caution is required. Most incidents take place at night, therefore outside of the period authorized for humanitarian activities. Likewise, the February 2020 local elections are not expected to disrupt humanitarian activities.

1.3 Scope of Analysis

In 2019, eight out of ten regions in Cameroon continue to be affected by one of the three humanitarian crises, and the analysis of the humanitarian needs continues to focus on the people affected by these crises.

During the joint analysis carried out in the regions and at capital level, IDPs, host communities, returnees and refugees were

identified as the most affected population groups. Different population groups are affected differently by the different crises, based on sex, age and status.

Ongoing hostilities in the North West and South West regions continued to lead to displacement. In order to understand the displacement and the development of needs, a MSNA was carried out in August 2019 in both regions. Meanwhile, reports of population movement to other areas of Cameroon increased. Based on these reports, the humanitarian community agreed to also analyze displacement in the Littoral

and West regions to better understand the needs of the displaced population and host communities. The Multi-Sector Initial Rapid Assessment (MIRA) carried out in November 2019 found over 200,000 IDPs in these two regions, with over 50% of them children of school-age. The MIRA carried out in November 2019, found 23,600 IDPs in Yaoundé and its suburbs, 63% of them children.

1.4

Humanitarian Consequences

Humanitarian consequences of the crisis

The effects of armed conflict in the Lake Chad Basin and Central African Republic, and clashes in the North West and South West regions of Cameroon continue to affect the physical and mental well-being, living standards, and resilience and recovery of the people living in Cameroon. Chronic vulnerabilities, diminished

coping capacities and a lack of access to basic services have left an estimated 3.9 million people in need of humanitarian assistance in Cameroon in 2020⁶. More specifically, 3.9 million people are affected by problems related to physical and mental wellbeing, 3.8 million people are affected by problems related to living standards, and 3.4 million people by problems related to resilience.

15%

Physical and mental wellbeing consequences of humanitarian situations have a direct effect on people's mental and physical integrity and/or dignity. These include but are not limited to: death and injuries; morbidity (acute infectious chronic diseases and outbreaks); malnutrition (acute and chronic); health outcomes related to Severe Food Insecurity (IPC phases 3-5); physical and mental disability, impairing people's ability to move, communicate, learn etc.; human rights violations such as arbitrary detention, targeted violence and killing.

In Cameroon, for 2020, 3.9 million are facing critical problems related to physical and mental well-being. 50 per cent of them are children under 18 years. The main needs relate to protection, including child protection and SGBV, health and food. 2.7 million people are in need of protection assistance. 2.5 million people need urgent medical care. Over 1.3 million people are estimated to be food insecure, almost 1 million of them in the North West and South West regions.

Food Security	Food insecurity	- No access to land due to insecurity - Challenging humanitarian access - Looting of livestock - Reduced food production, reduced prices in rural areas, increased prices in urban areas (esp. NWSW)	Women and children headed households	2.1 M Far North: 397k NWSW: 1.8 M

In the **Far North**, 1 million people suffer from problems related to their physical and mental wellbeing. The violence experienced by the population in this region leads to high levels of physical and psychological trauma, family separations, loss of livelihoods leading to food insecurity and the use of negative coping mechanisms such as prostitution, early marriage and child labor.

The situation in the **North West and South West** regions which started as a political crisis has led to a complex humanitarian emergency with 2.3 million people in need. The continued deterioration in the security situation led to more displacement and an increase in needs.

Attacks on medical staff and infrastructure have become another characteristic of the crisis with more than 35 percent of the Government run health facilities not operational in the two regions, and the remaining only partially functional. There has been an increase in maternal mortality rates, as well as infant mortality, and in some areas only 12 per cent of women are giving birth in health centers. In 2019 there have been three measles outbreaks, as well as an outbreak of monkey pox and cholera in the South West, and almost no surveillance in the North West. The nutritional status of children is deteriorating due to multiple issues related to health and food insecurity. There has also been an increase in early pregnancy, forced marriages, survival sex, child labor, forced recruitment of young men into non-state armed groups, and sexual and gender-based violence, including an increase of domestic violence. The increased recourse to domestic violence is explained by the fact that, while men seek to replicate the masculine ideals of protector and provider for the family, the current political and economic context puts them under increasing pressure. The crisis context, and the economic hardship it generates, is perceived by some as "devirilizing". Men's frustration at being unemployed, seeing their wife play an increased economic role to earn a living, combined with the fact that violence is considered as socially acceptable in some communities, leads to a

recourse to domestic violence as a means of asserting their authority and domination⁷.

People in rural or hard-to-reach areas are most affected because of limited or no access to medical, nutrition and WASH facilities. This population is mostly made up of women and children. These communities also receive the least humanitarian assistance due to the logistical, security and financial difficulties accessing them. Furthermore, extremely vulnerable individuals such as the old and chronically ill (HIV, TB, diabetes), people with disabilities, widowed men and women have lost their usual support during displacement and thus are subjected to disproportionate suffering. Widowed women, who represent 31% of households in the South West and 38% of households in the North West (an increase of about 10% compared to 2017⁸), not only face economic hardship but are also at particular risk of gender-based violence, including sexual exploitation and abuse. People with disabilities are more likely to be exposed to danger from attacks, including because of barriers to escaping and staying out of harm's way, and because of the degradation of the support systems which existed before the crisis.

The limited humanitarian assistance, coupled with limited availability of and access to basic health and WASH services and poor vaccination coverage are likely to lead to outbreaks of vaccine-preventable diseases, water borne diseases and an increase in malaria cases. The cholera outbreak declared in the South West of Cameroon in November 2019 is already one example.

A major protection issue arises from IDPs who have either lost their ID cards or have had them destroyed. Human rights abuses and violations, including torture, arbitrary arrest and detention and forced disappearances, continue to be usual practices in the North West and South West.

Critical problems of the population in the East, Adamawa and North regions related to physical and mental wellbeing

SECTOR	CRITICAL PROBLEMS	ASSOCIATED FACTORS	PARTICULARLY VULNERABLE GROUPS	PIN
Protection	- Child marriage, sexual violence and exploitation, including rape, early pregnancy and sexually transmitted diseases - Child labour, economic exploitation - Limited freedom of movement - Family separation	- Cultural and social norms and practices patriarchal construction of society - Gender inequality - Lack of appropriate support and monitoring for unaccompanied and separated children - Poor capacity of social services, esp. for children - Limited access to civil status documents, incl. birth certificates - Limited access to legal and health services - Protracted nature of refugee movement and settlement - Scarcity of resources and economic opportunities	- Children, adolescents, especially young girls - Refugees	Protection 403k Child protection 108k GBV 29k
Health	Epidemics	- Weak vaccination coverage - Poor access to drinking water		178k
Nutrition	Malnutrition	- Weak hygiene practices - Open defecation - Weak knowledge around young child feeding	- Children under 5 - Pregnant and lactating women	204k
Food Security	Food insecurity	- Economic vulnerability - Poverty	Refugees	223k

In the eastern regions, 600,000 people suffer from problems related to their physical and mental wellbeing. Sexual exploitation, child marriage, rape and physical and emotional violence continue to be perpetrated against women and girls. Some forms of violence are rooted in cultural and social norms of gender inequality, poverty, ignorance and lack of respect for women's rights. Children are also confronted with non-schooling, school dropouts, family separation, and economic exploitation, with, for example, child labour in mines to help their families

in a context of socio-economic insecurity and reduced assistance.

Furthermore, an increase of food insecurity and malnutrition among the refugees and host community members is observed since the arrival of the refugees and the reduction of food rations. Statistics available reveal chronic malnutrition rates of 41% in the North and 37% in the East. Pregnant and lactating women, children and the elderly are most affected by malnutrition. The increase in the vulnerability in the East is leading to child labor to the detriment of education.

WITH DISABILITY

15%

Living standards are those humanitarian consequences that have a direct effect on people's ability to pursue their normal productive and social activities and meet their basic needs in an autonomous manner. They manifest in different types of deficit and the use of various coping mechanisms to meet basic needs such as the lack of: food; income; productive assets (e.g. land, animals, tools, shop, etc.); access to basic services such as health care, water, sanitation, shelter, education; access

to formal and informal social assistance; access to legal documentation; access to markets etc.

An estimated 3.8 million people cannot attain a minimum standard of living in Cameroon. The regions affected by the different crises are chronically and structurally underdeveloped: symptoms are the poor infrastructure and the lack of basic services.

In the **North West and South West** regions, the crisis has had a major impact on the education sector: for the past three years, insecurity, displacement of teachers, and threats and attacks on education infrastructures and personnel have left 850,000 school aged children out of school. As of October 2019, an estimated 30,000 students have been integrated in the primary schools of neighboring regions (Littoral and West), leading to an overstress of the existing education capacity in these regions, with reports of school classes of 200 children.

Lack of education, already leading to developmental gaps in literacy and numeracy, will lead to illiteracy in the long term. Lower educational levels are associated with high protection risks, increase in child pregnancies, higher child and maternal mortality rates, and reduced incomes. This will take generations to resolve.

Economic activity has been heavily impacted by the crisis in the North West and South West. Displacement has meant a loss of resources for

food self-reliance. It primarily affects the access to land to cultivate, the loss of livestock and of the families' productive assets. Men, who are overwhelmingly the titled landowners,⁹ are affected by the spoliation of their property or by the fact that it has become inaccessible. Women are also heavily affected: The rural sector is mainly driven by women who represent 71.6% in the informal agricultural sector.¹⁰ The men, who were wage earners, gave up their jobs or left the villages because they could not continue their work due to the prevailing insecurity.¹¹

Low living standards and lack of access to essential services, particularly for those displaced, has significantly increased women's workload, due to a rise in morbidity and to the fact that children are out of school, resulting in increased care. Also, collecting water or firewood, are time consuming and expose women to dangers. As a result, and because these tasks require significant daily investment, women are particularly affected by a lack of access to income-generating activities, with less resting time and a lower access to decision-making forums.¹²

Due to transportation challenges, destruction of facilities and insecurity, IDPs and rural host communities are turning to alternative healthcare in the form of traditional healers. In combination with lack of documentation, loss of income, and reduced numbers of health practitioners, this has led to the use of unqualified or underqualified health practitioners. A shortage of safe drinking water in rural areas

leads to gathering water for drinking and domestic use from streams, rivers and unprotected wells. Open defecation or construction of unsafe latrines is a common practice in most rural settings. Waste is not being collected in rural areas and is mostly thrown into streams (reducing water quality), bushes or burnt.

Critical problems of the population in the East, Adamawa and North regions related to living standards

PEOPLE IN NEED	WOMEN	CHILDREN	WITH DISABILITY
521k	57%	52%	15%

SECTOR	CRITICAL PROBLEMS	ASSOCIATED FACTORS	PARTICULARLY VULNERABLE GROUPS	PIN

Shelter & NFI	Lack of decent shelter	Long-term settlement in transitional shelters	Off-site refugees	14k
Education	Weak access to education	Continuous arrivals of Central African refugees creating considerable pressure on a structurally weak education system	Refugees	174k
WASH	Limited access to drinking water, hygiene and sanitation services	Low funding levels and a lack of significant investment in WASH	Refugees, host community	309k
Health	No access to education	Insufficient or absent water points within and outside refugee sites		42k

In **eastern and northern regions**, the influx of refugees is exerting significant pressure on already limited natural resources and basic social services in host areas, exacerbating pre-existing vulnerabilities. The number of CAR refugees has increased from 217,000 in 2017 to 245,000

in 2018 and to 270,000 in 2019. The gradual decrease of humanitarian assistance and the insufficient level of funding for development projects negatively impacts access to basic services by vulnerable populations.

Critical problems related to resilience and recovery

PEOPLE IN NEED

3.4M

WOMEN

51%

CHILDREN

49%

WITH DISABILITY

15%

Resilience consequences in the framework of the humanitarian programme cycle are those humanitarian consequences that reflect the ability of people to withstand future stresses and shocks on the short and longer term. Resilience capacities and associated causes are analysed notably as part of the humanitarian-development-peace nexus agenda and to inform joined-up planning between humanitarian, development and peace actors as appropriate.

Approximately 3.4 million people face critical problems related to resilience and recovery. Humanitarian challenges are reinforced by structural factors and chronic vulnerabilities that hinder the long-term recovery of affected people. Gender inequalities are an important factor influencing adaptation strategies and affecting the recovery capacities of

women and girls: The use, possession and control by women of social or economic household resources is weak. Thus, only 3% of women in the country own a house without a land title and 1.6% own a land title in their name. The unpaid workload that reproductive work implies, combined with the fact that women have extremely limited access and control over resources, partly explains why the female population is more affected by poverty: While 39% of the population lives below the poverty line, this rate rises to 51.5% for women. Of these, 79.2% are underemployed.¹³ The fact that they are socially and economically disadvantaged and, also, that they are largely excluded from public decision spheres, including conflict resolution processes and peacebuilding in general,¹⁴ will greatly hamper their resilience and their recovery.

Early Recovery	Limited access to employment opportunities and vocational training	- Insecurity and subsequent displacement - Decrease of economic opportunities due to situation of violence	- IDPs, host population - Youth - Women	265k

In the **North West and South West**, IDPs and host communities living in urban or peri urban areas generally have a better ability to cope. However, negative coping mechanisms can be observed in rural/hard to reach areas and in urban/peri-urban areas. Moreover, host communities share their limited resources with the displaced which is becoming a greater burden particularly on rural host communities.

In the North West, almost 40% of IDP households adopt potentially irreversible emergency food-based coping strategies, compromising their productivity and future ability to cope with shocks. Methods of coping include relying on less preferred, less expensive food, borrowing food, reducing portion size or number of meals and reduced adult

consumption to prioritize children to eat.¹⁵ Girls are the most vulnerable to sexual exploitation to meet their food needs. 28% of IDP households in the North West resort to livelihood based coping strategies such as selling their land or house, begging or selling the last female animal. This is likely to lead to a reduction in future productivity. Within the North West, only 17% of all IDP households do not adopt any negative coping strategies. Although less severe, this remains true in the South West also with almost a quarter of IDP households reverting to emergency strategies to cope with food insecurity, compared to 16% of the host population.

Central African refugees living in the **East, Adamawa and North** regions, face a situation of protracted displacement. Most refugees settled in host communities where social and community services have limited capacity to meet basic needs. The low return intentions expressed by the refugees confirm the trend towards local socio-economic integration. As a structural aggravating factor, the East, Adamawa and the North have some of the highest poverty rates in the country.

The lack of civil status documents negatively affects the freedom of movement and the socio-economic integration of the Central African

Refugees. However, Central African refugees show a certain level of resilience. An increase in school enrollment has reportedly led to a decrease in early marriages. Women organize the collection of firewood in groups as a preventive measure against SGBV. An increase in the participation of women in private and public decision making is also reported. Furthermore, mechanisms for the resolution of community clashes and community-led total sanitation programmes have been established. Refugees and IDPs are provided with farm land and new crops are being introduced, forage crops developed, trees planted, technical capacity of the farmers are strengthened.

CATASTROPHIC

-

Intersectoral severity of needs

Intersectoral needs severity has been estimated at the level of each division and for every humanitarian consequence. The severity levels of all the indicators for each humanitarian consequence were considered to define the overall severity per humanitarian consequence. Sectorial indicators from protection, child protection, GBV, food security, health and nutrition were considered for the humanitarian consequence “Physical and Mental Well-being”. However, the severity of the child protection, food security and nutrition indicators were most acute, thus defining the overall severity. In the North West and South West regions, divisions such as Momo, Menchum, Boyo, Bui and Mezam, Fako saw their needs increased in terms of severity, while Donga Mantung, Lebialem, Mayo Sava divisions saw a decrease in terms of needs severity compared to the

humanitarian situation in 2018.

Sectorial indicators from health, WASH, early recovery, education and shelter/NFI sectors were considered for the humanitarian consequence “Living Standards”. However, the severity of living standards needs is defined by the health, WASH, early recovery and education indicators. Education needs in the North West and South West regions, for example, have decreased in comparison to 2018 due to the high migration of school-age children to neighboring regions. Furthermore, the severity of WASH indicators is most acute in the Far North, where the population is suffering from limited access to water, sanitation and health services.

Severity of needs related to physical and mental wellbeing

The severity map thus designed confirms that the North West, South West and Far North regions face the most severe humanitarian needs. The most severe and compounded needs continue to be found in divisions that witness direct conflict such as Logone-et-Chari and Mayo Tsanaga in the Far North and Menchum, Boyo, Mezam, Momo, Ngo-Ketunja divisions in the North West and the Manyu, Meme, and Fako divisions in the South West. 15% of the people affected by the well-being consequence in the Logone-et-Chari and Mayo Tsanaga divisions are refugees, 27% are IDPs, and 48% are host community members. In the North West and South West regions IDPs make up 26% of people in need of urgent humanitarian assistance and the host community 36%. A detailed breakdown of acute PIN and acute severity by consequence, by population group and by division are available in the HNO Cameroon PIN dataset on HDX.

Severity of needs related to living standards

In total, 3.8 million people are in need of humanitarian assistance to address living standard consequences. In the Far North, the same divisions in which the highest needs related to the physical and mental well-being are found, people are also struggling to meet their basic needs. Needs in Logone-et-Chari and Mayo Tsanaga relate predominantly to a limited access to health services, water and hygiene and sanitation services and a lack of economic capacity to meet essential needs. Affected populations in Mayo Sava (Far North), and the Donga Mantung, Mezam (North West), Fako and Meme (South West) divisions are also struggling meet basic education, health, WASH, shelter/NFI and livelihood needs.

Severity of needs related to resilience

In Cameroon in 2020, 3.4 million people require assistance to address resilience related needs. The lack of livelihood activities and economic opportunities in the North West and South West regions lead to large parts of the population being under food security pressure. The population of the Bénoué and Mayo-Rey divisions in the North and the Diamaré division in the Far North, are also in need of food, livelihood and early recovery support to be able to withstand future stresses and shocks on the short and longer term.

Part 2

Risk Analysis and Monitoring of Situation and Needs

IGAWA/FAR-NORTH, CAMEROON

Photo: UNICEF/CAMEROON

2.1

Risk Analysis

In 2020, Cameroon will continue facing three major challenges: the Boko Haram-linked crisis in the Far North; the consequences of the influx of Central African refugees into the eastern regions; and the humanitarian impact of the crisis in the South West and North West. Out of a total of ten regions, eight are affected. To date, an estimated 3.9 million people need humanitarian assistance.

According to the INFORM analysis, the risk index and the degree of exposure to hazards have been steadily increasing for three years. According to the Global Conflict Risk Index (GCRI), the current situation in Cameroon is classified as "at high risk of violent conflict" over the next 1 to 4 years; the risk of conflict is evaluated at 9.7 on a scale of 10. According to this index, the Far North, North West and South West regions are particularly exposed to this risk.

In the Far North, the two factions of Boko Haram ISWAP and JAS have been increasing attacks on Cameroonian territory. The multiplication of violence against the civilian populations have generated growing tensions within the communities on the one hand, and dangerously weaken the level of confidence between the national forces and the civilian populations on the other. Since June 2018, the significant strengthening of ISWAP's military capacities and the group's strategy based on indoctrination of populations and economic control of large areas in the Lake Chad region are new threats to regional stability, including in the Far North of Cameroon.

In these conditions, humanitarian assistance will increasingly face two types of constraints linked to the perception of its lack of neutrality: security risks on the one hand in areas increasingly infiltrated by armed groups, and administrative coercive measures on the other hand. Multiple efforts to implement the regional stabilization strategy will have little or no effect in the short term and the overall security situation could therefore deteriorate further in 2020 in the Far North.

With regards to the eastern regions, the prospects for the return of CAR refugees are not imminent given the persistence of the conflict in CAR. However, a first wave of 4,000 CAR refugees has been scheduled for voluntary repatriation in 2019, and the repatriation of an additional 10,000 refugees is planned by UNHCR in 2020.

In terms of natural hazards such as floods or droughts, the INFORM 2019 risk index shows that the Far North (5.8); the East (5.2) and the North West (5) have a level of risk far above the average. The occurrence of a natural disaster (floods or drought) in 2020 is likely in these regions, although the impact is predicted to remain moderate. The combination of such a crisis with the current humanitarian

situation and persistent insecurity would further affect the quality of life of the people in these regions.

Cameroon is also subject to recurrent epidemics, in particular cholera outbreak which occur almost annually. In addition to North and Far North affected since July 2018, a cholera outbreak was declared in November 2019 in the South West Bakassi area. Given the security situation, the deterioration of the health system and the lack of surveillance, this situation is likely spread beyond the locality of Bakassi.

Timeline of Events

2004 - 2019

Central African refugees in the East, Adamawa and North regions

2004 - 2013

First wave of **100,000** Central African refugees in 2004. The second wave of **150,000** new refugees in 2013, 35% of them settled on sites in the East and Adamawa.

JUNE 2019

Signing of the tripartite agreement between UNHCR, Cameroon and CAR for the return of Central African refugees. The voluntary repatriation of a first group of **4,000** Central African refugees is planned for 2019. On 6 November 2019, **1,164** refugees from the Central African Republic were repatriated to their countries of origin.

The conflict in the Lake Chad Basin region

DECEMBER 2014

Cross-border attacks by suspected Boko Haram members provoke the displacement of more than **60,000** Cameroonians within the Far North.

JANUARY 2015

35,000 Nigerian refugees arrive in the Far North. That number increased to **86,000** in December 2016, including **60,000** in the Minawao refugee camp, three times its capacity.

JULY 2018

Declaration of the cholera epidemic in the Central region followed by the North, the Littoral and the Far North. More than **990** cases were recorded, including 59 deaths as of December 21 2018.

JANUARY 2019

More than **35,000** Nigerians cross the border to seek refuge in Goura, in Cameroon's Far North. They fled repeated Boko Haram attacks in and around the northeastern Nigerian town of Rann.

OCTOBER/NOVEMBER 2019

About **80,000** people are affected by flooding in the departments of Mayo Danay and Logone-et-Chari in Cameroon's Far North.

NOVEMBER 2019

Despite the deployment of large security forces along the border since 2015, Boko Haram's cross-border attacks continue to be violent, particularly in the departments of Mayo Sava and Mayo Tsanaga. As a result, the number of IDPs continues to increase in the Far North region. The region is now home to **488,000** people living in forced displacement (**272,000** IDPs, **107,000** Nigerian refugees and **110,000** returnees without sustainable solutions).

Crisis in the North West and South West regions

OCTOBER 2017

First armed clashes and population displacement recorded in the North West, south West and towards Nigeria.

JULY 2019

Organization of a Multi-Sectoral-Needs-Assessment (MSNA) in the North West and South West regions. Protection, health and access to shelter and NFI are identified as key priorities with more than **485,784** IDPs and an estimated **40,000** refugees.

AUGUST 2019

Further displacement of populations from the North West and South West regions following the announcement of a new lockdown in Bamenda and Buea. The lockdown was called by armed groups as a result of the government's launch of the "back to school" campaign. Many households living in the North West and South West chose to migrate to French-speaking cities, fearing of being trapped by the protest and potential social unrest, and looking for a safe place where children can continue school.

SEPTEMBER 2019

Multi-sectoral assessment mission to the Littoral and Western regions. Protection, education, food, access to income-generating activities, and access to shelters and NFI identified as key priorities. **200,000** people are estimated to be displaced -this figure is three times higher than in September 2018.

Projected Evolution of Needs

In 2020, people in Cameroon will continue to be affected by the three above mentioned concurrent and complex humanitarian crises.

The overall number of people in need of assistance and protection in Cameroon in 2020 stands at 3.9 million. The needs of people affected by the North West and South West crisis continue to increase dramatically, while a decrease of people in need of urgent humanitarian assistance across the East, North and Adamawa regions and the Far North is projected for 2020. However, the decrease from 1.9 million people to 1.2 million people in need in the Far North has in large parts to do with the decrease of people projected to be food insecure in 2020. 1.3 million people needed food assistance in 2019. Less than half, 475,000 people, are projected to be food insecure in 2020. While important interventions in the food security sector have contributed to improve the food security situation in the Far North, the change of methodology to estimate people in food insecurity, from EFSA for 2019 to the use of Cadre Harmonisé data for 2020, also contributes to the difference in the estimation of food insecure people. Furthermore, while the needs are projected to decrease, they continue to be only partially met. The pressure on diminishing natural resources in the eastern regions and the Far North is leading to the destruction of the environment and potentially an increase in intercommunal conflict.

The security situation is likely to deteriorate in 2020 in the Far North and the North West and South West regions. 2.7 million people will require protection assistance due to restricted freedom of movement, ongoing hostilities or the threat of violence

and abuse. In areas affected by conflict and armed violence (Far North, North West and South West and regions), agricultural production will be further affected. In these areas, challenging humanitarian access due to underfunding, insecurity and poor road infrastructure, is likely to remain a key impediment to reach people in need.

In the **North West and South West region**, the humanitarian situation is projected to further deteriorate in 2020. The lack of progress towards political solutions, and continued violence are likely to result in further displacement and increase of humanitarian needs. The limited humanitarian assistance, coupled with highly reduced availability of and access to basic health and WASH services and the poor vaccination coverage, are likely to lead to outbreaks of vaccine preventable diseases, water borne diseases and an increase in malaria cases. The education system is unable to function in a context of high insecurity, and teachers and school aged children need psychosocial support. Lack of education, already leading to developmental gaps in literacy and numeracy, will lead to illiteracy in the long term. Lower educational levels are associated with high protection risks,

increase in child pregnancies, higher child and maternal mortality rates, reduced income and will take generations to resolve.

Hostage taking for ransom or extortion of money are a growing phenomenon and humanitarian staff and assets are increasingly targeted. The fragmentation of non-state armed groups and the rise of criminality and banditry are likely to lead to a worsening security situation which will further negatively affect humanitarian access. Humanitarian actors are required to conduct extensive sensitization and deconfliction activities to gain and maintain access. This is particularly so for communities in rural and bush areas.

LOMIE/EAST REGION, CAMEROON

2.2

Monitoring of Situation and Needs

Humanitarian partners in Cameroon have a coherent and systematic method for data collection on population movement and humanitarian needs and will continue to use internationally recommended data collection tools to monitor the changing situation.

A summary of the indicators and data that will be monitored in 2020 at the inter-sectoral level is included below:

- Monitoring of IDPs and returnee's movements will continue through IOM's Displacement Tracking Matrix.
- UNHCR will continue to update refugee figures through its ProGres tool.
- Multi-Cluster/Sector Initial Rapid Assessments (MIRA) will also continue to be carried out to gain a rapid understanding of the overall needs of populations recently affected by crisis or disaster.
- Multi-Sector Needs Assessments (MSNA) will continue to be carried out in 2020. While not strictly a monitoring tool, the MSNA facilitates a deep understanding of the humanitarian situation and evolution of needs. Furthermore, in support of, and reinforced by the MSNA process, the humanitarian community in Cameroon has a more robust understanding of critical indicators to include in other jointly conducted needs assessments.
- The indicators used to inform the inter-sectoral analysis for the current HNO (see annexes) will be collected at a regular basis. Particular emphasis will be placed on the identification of multisectoral indicators in the monitoring and assessment processes in 2020.
- Among the dynamic tools, IOM-DTM's emergency tracking tools and rapid needs assessments, will continue to be used to gain immediate insight on needs of recently displaced populations.
- For increased situational awareness and context analysis, a wide range of data will continue to be monitored and shared through the existing coordination mechanisms.
- At operational level, field monitoring of needs and gaps, including through local partners will continue to be conducted.
- Data from key assessments and surveys such as the FSA, the Cadre harmonisé, the SMART, the Health Data Monitoring System, etc., will be used to monitor humanitarian needs for certain sectors that may have a major impact on the overall humanitarian situation.

OVERVIEW

In the Far North, refugees, displaced persons and some host populations face many protection risks, such as violence, including sexual violence against women and girls, arbitrary detention, family separation, lack of documentation and difficult living conditions that have an impact on vulnerable people. The situation of the more than 106,000 Nigerian refugees improved in 2019, with better access to asylum and biometric registration of refugees outside camp settings. However, physical protection, especially of refugees outside the camp and continued registration remain priority needs.

With the escalation of violence between government forces and non-state armed groups in the North West and South West regions of Cameroon during 2019, civilian populations are facing serious violations of human rights at the hands of the belligerents. The contextual complexity of the conflict increases the vulnerability of the civilian population and has disastrous humanitarian consequences: the massive displacement of the population, attacks on property, burning of houses and villages, family separation, loss of civil status documents, arbitrary arrest and detention, prohibitions on educational services leading to increased risks for children, lack of access to basic services that are severely affected by the crisis and serious human rights violations (killing, child recruitment, abduction, GBV incidents, etc.) The conflict has displaced at least 650,000 people since the end of 2017, including women and children who are at particular risk of incidents of sexual and gender-based violence as well as abuse, neglect and exploitation. With the persistence of conflict, this number, as well as protection needs, are likely to continue to increase during 2020.

In the East of the country, the 270,000 Central African refugees are mostly in a situation of protracted displacement and, like some of the populations that host them, have needs in terms of documentation, protection from sexual violence and child labour, and face insufficient access to basic services. The year 2019 did not see any massive arrivals from the Central African Republic and enabled the start of voluntary repatriation operation for about 4,000 individuals, which, although limited in number, gives hope for continued repatriation of refugees in 2020.

Far North Crisis

The protection of civilians remains a major challenge in the Far North region. Indeed, men, women, girls and boys face various

vulnerabilities and risks. The persistence of the crisis is causing significant violence, especially in the areas bordering Nigeria. In total, from January to September 2019, the protection monitoring network recorded 4,949 protection incidents against civilians in the Far North, including killings, kidnappings and armed incursions of Boko Haram as well as physical violence, extortion, arbitrary arrests and threats against persons and property perpetrated by a series of alleged perpetrators. There is a continuing need to strengthen monitoring and referral mechanisms and holistic care for survivors. Gender-based violence, such as rape, child marriage and sexual exploitation, is perpetrated overwhelmingly against women, girls and adolescents. Children are highly affected by conflict, exposed to violence, abuse and exploitation, family separation issues and have significant psychosocial needs. The needs of the population in terms of access to identity and civil status documents are also to be noted: while progress has been made with the finalisation of biometric registration of out-of-camp refugees in Logone-et-Shari, Mayo-Sava and Mayo-Tsanaga in 2019, the lack of documentation among internally displaced persons and refugees and inadequate recognition of refugee identity documents expose them to the risk of statelessness, denial of access to basic services and arbitrary arrest and detention. There are also needs in terms of strengthening detention monitoring, advocacy and capacity building activities for judicial and law enforcement actors, including sensitising communities on available GBV services and respect for the rights of women and girls.

North West and South West Crisis

The persistence of the crisis in the North West and South West regions, the hardening of the positions of the parties to the conflict in managing the crisis and the low interest of the international community have aggravated the impact on the lives of the civilian population. The number of internally displaced persons in the two crisis-hit regions increased from 350,920 in December 2018 to 450,264 in August 2019, an increase of 28.3%. In addition to these figures, it is estimated that at least 123,309 people moved to the West region, 76,880 to the Littoral region and 5,301 to Adamawa, who, although located in stable and secure areas, face protection issues such as access to documentation, survival sex and risks of stigmatisation.

The displacement situation remains dynamic with new displacements to forest areas and urban centres in both crisis-hit regions, as well as

to neighbouring regions where schools and other basic services are functional and employment opportunities are available. The divisions most affected by the presence of displaced persons in the two crisis-hit regions are Mezam, Ngo-Ketunjia, Bui, Boyo and Momo in the North West, and Meme, Fako and Ndian in the South West. Host communities, already strained by the conflict, are facing increased pressure to access services, resources and basic needs.

The ongoing conflict between armed forces and non-state armed groups has had a significant impact on the security situation, protection and access to services and has considerably increased the vulnerability of the population. Insecurity, including prolonged periods of lockdowns, clashes or the prospect of a possible confrontation between armed actors, protection risks and the absence of State authority are the main causes of population movements. According to protection monitoring carried out, 5,187 protection incidents were recorded between January and September 2019. Attacks on villages, burning of houses and killings have been recorded. House destruction alone accounted for 41% of the incidents recorded and homicides for 7.5%. Displacement caused by violence in the villages resulted in lost documentation for many people, which has an impact on their freedom of movement and exposes them to the risk of arbitrary arrest in this tense security environment. GBV incidents, affecting women and girls in particular, were reported, as well as situations of arbitrary detention and risks of recruitment into armed groups, mainly affecting men and boys. Young men, women and girls flee rural areas to urban centres in search of security and employment. In this context of crisis-induced socio-economic fragility, the use of sex as a negative coping mechanism is reported. Women who have lost their partners face more responsibilities as heads of households, making them even more vulnerable. Children have been separated, abandoned and kidnapped and educational services greatly reduced, resulting in increased risks for children.

Access to legal services is very problematic, with risks of arbitrary arrest and a lack of legal response to gender-based violence. The crisis has also severely affected vulnerable people; insecurity and the closure of health facilities limit access to reproductive health services and treatment for HIV and pregnancy monitoring for pregnant women. It has been reported that people living with disabilities have been tortured or killed by parties to the conflict and that women and girls living with disabilities are repeatedly subjected to sexual violence. In addition, these people also have very limited access to services and protection due to insecurity.

Central African refugee Crisis

The Central African refugees are in a situation of protracted displacement, with little hope for a durable solution in the medium term, even though a voluntary repatriation operation was set up at the end of 2019. About 70% of refugees are settled in host communities where social and community services are structurally weak with limited capacity. Freedom of movement is de facto restricted by the requirement to hold a permit to leave the division of residence, by harassment at checkpoints and by inadequate recognition of identity documents by the police. Socio-economic integration is thus strongly impacted.

In addition, child marriages, sexual exploitation, rape and physical and emotional violence are perpetrated against women, girls and adolescents, these forms of violence being rooted in cultural and social norms, gender inequality, poverty, ignorance and lack of respect for women's rights. Children are also confronted with school dropouts, family separation, and economic and sexual exploitation, with, for example, child labour in mines to help their families in a context of socio-economic insecurity and reduced assistance. Access to civil status documents remains a challenge, as does the need for continuous updating of registration data for a population scattered over a large area of land. Due to scarcity of resources and economic opportunities, promoting cohabitation between host populations and refugees is a continuing need for protection.

PROJECTED NEEDS

In the Far North, the increasing number of displaced persons who have returned requires increased support as part of a comprehensive solutions strategy. With regard to Nigerian refugees, the Tripartite Commission's supervision of the repatriation of Nigerian refugees is a priority to ensure that it is carried out on a voluntary basis, in safety and dignity.

Protection needs in the North West and South West regions are expected to further rise in 2020, in light of the increase in violence and displacement.

At the end of 2019, the implementation of voluntary repatriation for approximately 4,000 individuals, allowing them to return to specific areas in western CAR, paves the way for durable solutions for part of the refugee population in 2020.

The elections scheduled for late 2020 in CAR may also have an impact on the protection and solutions situation for Central African refugees and will require contingency planning in anticipation of potential new protection needs.

Far North Crisis

In 2019, the Far North Child Protection Working Group observed that the increase in threats and attacks by non-state armed groups in the Far North region of Cameroon continued to lead to significant population movements, increased difficulties in access to basic social services for children and a lack of development opportunities for adolescents and youth and further weakened community ties.

As girls and boys represent about 62% of the displaced populations in the region, they are directly affected by the adverse effects of the crisis. The major problems facing children are multiple. Due to insecurity and population movements, many children have been forced to flee, leaving their homes and villages, sometimes witnesses or victims of violence; involving high levels of stress and, thus, potentially, significant negative consequences for their cognitive and emotional development. Family separations due to sudden population displacements continue to occur, although to a lesser extent than at the beginning of the crisis. The abduction and recruitment of children by non-state armed groups continues to be a major issue, particularly for girls aged 9 to 13 and boys aged 10 to 17. In addition, children who were formerly associated with non-state armed groups face real difficulties in reintegrating into their communities of origin, not yet prepared to receive persons who have had contact with non-state armed groups as they suspect that they are still in contact with these groups.

Adolescent girls aged 10-19 report many forms of violence against them, including conflict-related violence, community violence and gender-based domestic violence. They face sexual harassment and violence, as well as early and forced marriage as well as kidnapping by non-state armed groups. Most of the girls who have managed to escape from non-state armed groups sometimes come back pregnant or even accompanied by children from sexual violence within these groups. Children born as a result of these acts of violence are stigmatized in communities and their rights are violated, starting with obtaining a birth certificate. In communities, girls who have survived sexual assault face stigmatization and are sometimes forced by their own families and communities to marry their abusers.

It should also be noted that children continue to be exposed to the risks associated with improvised explosive devices and war remnants and suffer the physical and psychological consequences.

In addition, communication between adolescent girls/youth and adults is a serious and profound problem but not very noticeable due to the customs and habits of the region. The desires of adolescents

and young people are not always understood by adults who impose their vision on them. Thus, adolescent girls in particular are largely excluded from family and community decision-making and have little recourse to be heard. The accumulation of these frustrations can lead adolescents and young people to believe in rhetoric used by non-state armed groups, which sometimes can lead to radicalization.

Finally, children without birth certificates, including those who lost them while on the move, face significant difficulties in accessing education and even when they do, they are prevented from taking the primary school exam due to this lack of documentation. Although this problem affects girls and boys in the same way, girls are more affected because of the burden or social norms that are unfavorable to girls, in addition to the absence of birth certificates as a factor contributing to girls' failure to stay in school. This situation also raises the issue of their protection in the event of abuse, violence or exploitation, where the issue of age determination is crucial for better protection and adequate psychosocial and medical services. It also exposes them to the practice of child marriage, which is a major problem in the region, aggravated by the crisis since 2013 and which is equivalent for some parents to a means of survival in a context where access to an income-generating activity or to land for agricultural activities is limited.

North West and South West Crisis

Children, girls and boys are the first victims of the crisis. This results in serious violations of their human rights and constant insecurity, causing family separations over the past three years, limiting access to basic social services such as education, and causing both visible and invisible trauma in the short and long term. The physical and psychological well-being of these children, who are both direct and indirect witnesses to conflict-related violence, is at stake.

Displacement, violations of human rights and children's rights, the breakdown of family and community ties are part of their daily lives. Populations have been displaced to urban/peri-urban areas and rural areas difficult to access. In this crisis, the education system, which generally provides a protective environment for children, is a direct target, exposing children to protection risks where there should not be any. Where schools are operational, the presence of defense or security forces around schools to protect learners exposes children to the risk of attacks by armed groups as well as to the trauma caused by the constant presence of these armed forces around them. The interruption of schooling creates a situation where children in rural areas no longer speak English. Without education, there will be no

opportunities for personal or community development.

Reports from the field indicate that young boys, but also young girls, have joined non-state armed groups, some in search of revenge or livelihoods, while others have been abducted and forcibly recruited. Child protection actors report that children leaving non-state armed groups receive no support for their reintegration, are stigmatized and risk being arbitrarily killed. Adolescents are also more likely to be victims of arbitrary arrests, forced recruitment and extrajudicial executions and are at greater risk of injury or death directly related to the conflict. As a result, some families limit their sons' movements or send them to cities to eliminate the risk of their children being killed or forcibly recruited.

Finally, as a result of displacement and destruction of homes, many boys and girls no longer have birth certificates or have never had one, which has a direct impact on administrative procedures such as national examinations and makes them more vulnerable to exploitation or trafficking and arbitrary arrest and detention, particularly for boys aged 14 and over.

At the individual level, many boys and girls are separated from their parents and are cared for by other members of their community or left alone as child heads of household, especially in urban and peri-urban areas, including neighbouring areas such as the Littoral, the West and even Adamawa (MIRA October 2019). Family tracing and the reunification of unaccompanied and separated children have been hampered by the general instability and security of the environment. In addition, children have limited or no access to basic social services. Thus, with regard to health services, two distinct consequences must be taken into account: on the one hand, a reported increase in infant mortality for children in general and, on the other hand, an increase in cases of disability for those who suffer injuries as a result of the conflict. Adolescent girls, on the other hand, are a particularly vulnerable group due to the combined effect of their age and gender discrimination, which leads to specific threats against them: they face the risks of rape and other forms of gender-based violence as well as early pregnancies, very often followed by unsafe deliveries and stigmatization. The most vulnerable families adopt negative coping mechanisms such as survival sex, child marriage for girls under the legal age of marriage and sending children in search of income in exchange for work. Reduced access to land for cultivation and lack of income-generating opportunities have led some families to reduce the quality and quantity of food, which in turn leads to malnutrition. The Child Protection Area of Responsibility also reports an increase in drug abuse and suicide among adolescents.

Population displacements directly affect the North West and South West regions, but also the West, Littoral and, to a lesser extent, Adamawa regions, where people seek security, economic opportunities and access to education. The needs of these children are similar to those of children left in the North West and South West, with a particular focus on family separation, early pregnancy and child sexual exploitation, and child labor (MIRA, October 2019).

Central African refugee Crisis

In 2019, the northern, Adamawa and eastern regions continued to host Central African refugees, with limited resources to meet their needs and a low level of integration of these refugees into their communities. As of September 2019, the number of refugees stood at 270,924 (141,260 women and 129,664 men), 55.47 per cent of whom were children (74,698 girls and 75,847 boys). The total host population is estimated at 5,287,103 people (2,676,945 women and 2,610,158 men), 47% of whom are children (2,485,156).

With already high levels of poverty in the region (41.7% in Adamawa and 30% in the East), the influx of Central African refugees has overburdened the already limited basic services to meet the needs of the original population. As a result, there are few services available for children. Thus, social services, birth registration services and specialized psychosocial support and child protection services are not able to meet all demands.

Given the protracted nature of refugee movement and settlement in these three regions of the country, the protracted nature of the crisis in the Central African Republic and the low prospects for return, long-term investment in durable solutions and the development of systems to meet the needs of refugees and host communities will be essential.

The main protection risks to which children are exposed are as follows:

- Child marriage, sexual violence and exploitation are mainly linked to negative social norms and practices, as well as to the patriarchal construction of society. Thus, adolescent girls are at risk of rape, early pregnancy and sexually transmitted diseases.
- The lack of appropriate support and monitoring for unaccompanied and separated children, as well as the poor capacity of social services to respond quickly to their immediate needs.
- Child labor, which affects both boys and girls, particularly those working on mining sites to help their parents meet basic needs in a context of socio-economic fragility and reduced humanitarian assistance, as well as extremely limited government subsidies to families. In communities surrounding mining sites, young girls are at high risk of sexual exploitation. In addition, this condition increases the risk of drug and alcohol use among adolescents and youth.
- Neglect and abandonment of children by their parents and lack of appropriate care, as well as low skills for effective positive parenting.
- The lack of birth certificates, which limits children's access to education and learning opportunities. In addition, children without a birth certificate have no legal identity and are more exposed to the risks mentioned above, such as child marriage and child labor.

3.1.2

Gender-Based Violence

PEOPLE IN NEED

1.6M

WOMEN

100%

CHILDREN

49%

WITH DISABILITY

15%

It is estimated that a total of 1,539,452 people are in need of GBV assistance in all regions of the country: the needs of 465,374 people in the Far North region and of 72,706 people in the East fall under the "Living standard" consequence, while the needs of 320,648 people in the South West and 335,156 people in the North West fall under the "physical and mental wellbeing" consequence.

In the Far North, people face many risks of violence, including sexual and gender-based violence. In the **east of the country**, populations are plunged into a protracted crisis situation leading to protection needs, including gender-based violence. With the escalation of conflict in the **North West and South West** regions, civilian populations are facing serious human rights violations. Women and children are at particular risk of facing incidents of sexual and gender-based violence as well as abuse, neglect and exploitation. These populations are in need of life saving GBV services¹⁶ to deal with the consequences of GBV and recover; capacity building to ensure self-protection through community-based protection mechanisms.

In the **Far North**, from January to October 2019, a total of 2,622 GBV cases were reported to users of the GBV information management system (GBVIMS). The data analyzed revealed significant gaps in the provision of essential GBV services. On average, only 7% of rape survivors received clinical management within 72 hours of the incident, due to delays in reporting and sometimes the unavailability of care, only 4% received legal aid and security services, and 20% received safe space accommodation services. There is a growing need for safe spaces to shelter not only for women and girls at risk but also those who have been subjected to GBV, especially women who are in an abusive relationship.

Scope of the analysis

The inadequacy of protection services (police, judiciary, social services) and the low capacity of actors to deal holistically with gender-based violence are among the root causes of the crises. As for structural causes, there are inequalities of power, weakness of institutional mechanisms and weak synergies between response actors. The actions of both the non-state armed groups and the government forces threatens the fundamental rights for women and girls: women have been subjected to rape and other forms of sexual violence by both non-state armed groups and government security forces.

Cross-Sectoral Analysis

GBV risks were also identified by the other sectors.

Health: The lack of involvement of men in the awareness raising on family planning, the lack of female gynecologists/midwives which would be preferred by women, the lack of training of health personnel in GBV, the breaking/expiry of PEP kits in some health facilities are just some of the challenges. There is a need to build the capacity of more health professional to provide the clinical management of rape (CMR), especially in hard to reach areas and villages.

Education: Drop out of school for early and forced marriage, for petty commerce, non-schooling policy by the NSAGs has resulted in displacement of households to locations where access to school for children exist. This resulted in overcrowding of classrooms putting more strain on education.

Food security: Discrimination in the distribution of agro-pastoral inputs and in the exploitation of agricultural land and resources has been observed.

Livelihoods: The preference of humanitarian actors to support women can lead to domestic violence. Women who received livelihood support have reportedly been denied of their resources by their husbands.

Shelter: Non-respect of age and gender when building shelters: promiscuity (latrine, bedroom, NFI).

WASH: Location of water points and latrines involve GBV risks if they are located far away from the affected populations' accommodation. Also, the lack of latrine doors also increase the risk of GBV.

Protection/security: insufficient training in GBV for security forces (gendarmerie and military police). GBV against women and adolescent girls is reportedly committed by Government soldiers and members of non-state armed groups.

3.2 Education

PEOPLE IN NEED

1.8M

WOMAN

41%

CHILDREN

100%

WITH DISABILITY

15%

Overview

The CAR, Lake Chad Basin, North West and South West crises have impacted 1.8 million school-aged children (50% of girls) who will need humanitarian assistance in education in 2020. These multiple crises have a common denominator: children are in distress and teachers lack knowledge and competence to deal with crises affected students. Crises have weakened the education system in these areas where structural challenges were already inherent, particularly in the Far North and in the East and Adamawa. The most pressing needs for school-age children affected by the crises include:

- Access to the Protective Learning Environment,
- Quality and relevant education services provided by teachers and education personnel with the knowledge and skills to deal with large class sizes and children in distress,
- Teaching and learning materials.

Far North Crisis

About 400,000 school-age children (49% of girls) need assistance in the education sector in the Far North region, particularly in Logone-et-Chari, Mayo-Sava, and Mayo-Tsanaga. Due to the displacement of families, the host schools integrate additional displaced students, which constitute a burden for already weak education services¹⁷. The Far North region is facing repeated floods and droughts due to the effects of climate change. More than 18,000 students have been affected by the flash floods that devastated some communities (and school infrastructures and materials) in Logone Birni, Waza and Zina in the Logone and Chari and Kai-Kai and Maga in the Mayo Danay divisions during the months of October and November 2019.

Moreover, parents lack the capacity to support children's education because of the high incidence of poverty aggravated by insecurity and displacement; this affects the availability of teaching and learning materials for the most vulnerable students.

North West and South West Crisis

The North West and South West crisis has left more than 1.2 million school-age children (51% girls) in need of humanitarian assistance in the North West and South West, Adamawa (Mayo Banyo), Littoral, West, and Centre (Yaounde). Approximately 900,000 of them need urgently access to education services. The main needs for children of the North West and South West are linked to the risks associated with attending formal education, the unavailability of formal education

offer in areas of insecurity, the general lack of protective learning environment and the low capacity of teachers and education personnel to care for children who are in distress due to the crisis.

In the North West and South West regions the situation is dramatic: as of November 2019, only 30% of public basic education schools are functioning in the South West, with 63% of teachers at post. Similarly, in secondary education, there are 30% of functional schools and 38% of teachers. In the North West Region, about 27% of pupils are reported present in primary schools, while only 11% of secondary schools are functional. It is estimated that 30,000 displaced pupils have been integrated into primary schools in the neighboring regions of (Littoral and West) generating an overload of the existing education capacity in these regions, with an average pupil/classroom ratio of up to 200 children.

Central African refugee Crisis

Continuous arrivals of Central African refugees put considerable pressure on an already weak education system in the North, Adamawa and East regions, where 200,000 school age children need humanitarian assistance due to the crisis. About 80,000 of them are out of school and in need of access to education services.

Analysis of Humanitarian Needs

These multiple crises have a common denominator: children are in distress and teachers lack knowledge and competence to deal with crises affected students. Crises have weakened the education system in these areas where structural challenges were already inherent, particularly in the Far North and in the East and Adamawa.

The most pressing needs for school-age children affected by the crises include:

- Access to the Protective Learning Environment,
- Quality and relevant education services provided by teachers and education personnel with the knowledge and skills to deal with large class sizes and children in distress,
- Teaching and learning materials.

3.3

Food Security

PEOPLE IN NEED

2.4M

WOMAN

51%

CHILDREN

47%

WITH DISABILITY

15%

Overview

In October 2019, the analysis of the Cadre Harmonisé estimated the number of food and nutritionally insecure people at 5,220,000, i.e. nearly 32% of the population. Of these, 1,370,000 people have immediate survival needs and require emergency food assistance (phases 3 to 5) and 3,850,000 people need livelihood protection (phase 2).¹⁸

Far North Crisis

In the Far North region, heavy rains in the northern part of the region forecast good agricultural production in the 2019-2020 crop year. However, in the Logone-et-Chari, Mayo Sava and Mayo Tsanaga divisions, which are most affected by the Boko Haram crisis, harvests will remain below normal. Acute food insecurity (stress) persists in these divisions. Households headed by girls and women are more food insecure than those headed by men and boys. In the other departments of the region, livestock looting and crop destruction by pachyderms and granivorous birds will continue to negatively affect people's livelihoods. Stocks in poor households are gradually being depleted, which will lead to the deterioration of livelihoods and limit the access of vulnerable populations (IDPs and local people) to a healthy and balanced diet.

In October 2019, heavy rains caused flooding in the Logone and Chari and Mayo Danay divisions which led to losses in the cereal production and other productive assets of the population, affecting food availability. The usual pachyderm damage could affect more the districts of Goulfey and Maltam in Logone-et-Chari and Kalfou in Mayo-Danay. Over the next seven months, prices of rainfed sorghum could remain on average 25 percent below the five-year average on the Maroua market.

North West and South West Crisis

Continued fighting over the last three years, exacerbated by limited access to fields and livelihoods, coupled with the challenging humanitarian access to certain localities and low coverage of food assistance has led to acute food insecurity (crisis) and nutritional insecurity among the displaced and vulnerable populations in urban, peri-urban and bush areas in the North West and South West regions. Because of insecurity or movement restrictions, farmers in several communities have had difficulty since the beginning of the crisis in accessing their fields to cultivate. Transhumance and associated

movements have been disrupted, as are the production and supply circuits and the functioning of markets. The crisis has led to a great drop in agricultural and animal productivity, availability and access to products and foodstuffs. In addition, humanitarian actors' access to such common areas has been affected, which also limits the possibility of implementing productive asset creation projects. All this, combined with the frequent and massive displacement of populations in the affected areas, leads to the abandonment of assets and huge losses of assets (productive and non-productive) and livelihoods - fields and cultivated agricultural areas, animals, pastures, housing, granaries, cereal stocks, etc. Illegal taxes and unemployment caused by the dysfunction of enterprises and cooperatives will continue to negatively affect people's livelihoods.

The Cadre Harmonisé analysis in October 2019 estimated that 540,699 people in the North West and 427,778 people in the South West are considered food insecure. Meanwhile, the current assistance provided is small scale compared to the growing needs. The host community is also increasingly dependent on humanitarian assistance. Markets are limited and informal in most rural areas, leaving in-kind assistance as the predominant response option in these areas, but cash and vouchers are implemented on a small scale.

According to EFSA, 38% of households in the North West and 31% in the South West are female-headed. 60% of the food insecure population are living in the North West, while 40% are in the South West. Due to the difficult food security situation, the population has turned to adopting emergency strategies to survive, with about 40% of the IDPs in the North West and nearly a quarter of the IDPs in the South West engaging in such activities as selling land, livestock and houses.

Central African refugee Crisis

The results of the JAM conducted by UNHCR, WFP and its cooperating partners from November 2018 to May 2019 revealed that 81% of the refugees are highly vulnerable. Economic vulnerability is at the root of the overall vulnerability of refugees. New refugees in the camps (84%) are worse off, followed by new refugees outside the camps (81%) and refugees which arrived years ago (74%). In addition, 60% of the refugees require immediate food aid, and 39% of them are eligible for the livelihood programme.

Economic shocks have affected an average of 41% of the refugees,

resulting in very limited economic access to non-food needs such as health and education. Refugees and host communities have acceptable food consumption (on average 63 percent) and do not use high-risk coping strategies; however, they are highly vulnerable economically, indicating that poverty is the main driver of overall vulnerability. Sector partners are working together to develop a joint Minimum Expenditure Basket (MEB) and will further refine the needs of the prioritization exercise and validate the targeting criteria at the

community level.

95,753 people are projected to be food insecure (phase 3-5) between June and August 2020 in the East, Adamawa, and North regions, (East: 7,587; Adamawa: 18,576; North: 69,590) according to the October 2019 Cadre Harmonisé analysis, representing 2.3% of the total population.

3.4 Health

PEOPLE IN NEED

2.6M

WOMAN

51%

CHILDREN

50%

WITH DISABILITY

15%

Overview

Health sector partners estimate at 2.6 million the number of people needing emergency health humanitarian assistance in 2020, 51% of them women. The health situation in priority areas is characterized by a significant reduction in the number of functional health facilities and service delivery by qualified health personnel, difficult access to essential health care and low immunization coverage of affected populations which favor a resurgence of epidemics including measles, cholera and monkey pox.

Affected populations

The cholera epidemic declared in 2018, which affected the regions of the North (58% of cases), the Far North (31% of cases), the Center (3.5% of cases), the Littoral (0.5% of cases) and the South West (7% of cases), continues in the two northern regions (North & Far North) as well as in the South West. As of 8 December 2019, 2,064 cases of cholera (51% of these cases are women, 12% are under 5 years of age, 27% are women of reproductive age and 9% are people over the age of 60) with 111 deaths (47% of these deaths are women, 6% are less than 5 years old, 35% are women of reproductive age and 35% are people over the age of 60) were recorded for a lethality rate of 5.4%. Measles epidemics have also been declared in the Far North and North regions with a high risk of cross-border contamination. In the Far North, North West and South West regions, insecurity has reduced access to basic health services for almost 2.5 million people, 1.3 million of whom are women and 415,075 children under the age of 5. Nearly 300 health facilities, mainly in the North West and South West, are no longer functional (destroyed by conflict or abandoned by health personnel) while population movements, epidemics and the massive influx of wounded people following the different armed conflicts increase the complexity of providing quality health care.

Far North Crisis

The end of 2019 was marked by an increasing trend of attacks by the Boko Haram armed group along the border between Cameroon and Nigeria in the Far North. These attacks, which target both the populations and their livelihoods, have a significant impact on the vulnerability of the population, notably on their physical and mental well-being and on their living conditions. Four main needs identified: preparation and response to epidemics, mental health support, safe delivery for vulnerable women of reproductive age and assuring

equitable access to essential quality health care which takes into account the specificities of the different sexes and age groups. The organization of communities (men have a dominant role in families and minor children have difficulty reaching health facilities) makes women and children under 14 more vulnerable with regards to access to health care, making specific means (mobile clinics, preferential rates, etc.) necessary.

North West and South West Crisis

MSNA data of August 2019 estimates at 255 out of 723 the number of non-functional health units in the two regions. Attacks targeting health personnel has further reduced the availability of human resources. In 2019, the two regions recorded epidemics of cholera (302 cases, 14 deaths),¹⁹ measles and monkeypox. Emergency surgical care, mental health and psychosocial support, provision of sexual and reproductive health services including safe deliveries for vulnerable women, access to clinical management of rape and emergency vaccination for pregnant women and children are priority needs.

Central African refugee Crisis

The North region recorded 578 cases of cholera with 22 deaths in 2019. The risk of cholera transmission remains very high due to poor access to drinking water, non-existent sanitation as well as poor hygiene practices. With the risks of hemorrhagic fevers, it is important to strengthen epidemiological surveillance along the border in order to detect epidemics early and conduct a prompt and adequate response if needed. There is also an urgent need to strengthen emergency vaccination against measles and polio.

Three key figures

- Number of epidemics declared in 2019 and of high potential threat (Lake Chad Basin crisis: 4; Central African refugee crisis: 3; North West South West crisis: 3)
- Cholera fatality rate in 2019 (Far North: 4.6%; North: 3.8%; South West: 4.6%)²⁰ WHO standard (<1%)
- Percentage of births attended by qualified personnel, as of week 49 (2019): Lake Chad Basin crisis: 15.2%; Central African refugee crisis: 37%; North West South West crisis: 14%.

Overview

The consequences of the various humanitarian crises in Cameroon are aggravating factors for the deterioration of the already fragile nutritional state of the affected populations. In fact, the prevalence of stunting is above the alert threshold of 30% in all regions affected by humanitarian crises (with the exception of the South West) and the rates of acute malnutrition have not significantly evolved for several years and remain in the alert thresholds for the North and the Far North regions. Children under 5 with severe acute malnutrition are nine times more likely to die than their healthy peers. In these contexts of protracted crises, more than one in three children in the different affected regions do not grow well.

Pregnant and breastfeeding women are also particularly affected because they have poor access to sufficient quality and quantity food in a context of limited access to basic social services. Added to this are the close links between the nutritional status of the mother and her child during the first 1,000 days of life (from conception to the age of two).

In the context of massive population displacements (internally displaced persons or refugees), women and young children are particularly exposed to poor living conditions and the accumulation of trauma that can affect feeding practices for infants and young children, in particular the ability of mothers to ensure optimal breastfeeding, further undermining the nutritional status of the already most vulnerable populations.

Far North Crisis

In 2020, an estimated 107,000 people will suffer from global acute malnutrition (GAM), including 17,000 pregnant and lactating women and 90,000 girls and boys under the age of five. One in two children under five, 41,000 girls and boys, living in the Far North will suffer from severe acute malnutrition. The results of the latest SMART nutrition survey conducted in November 2019 by UNICEF and the Government of Cameroon showed a GAM rate of 5.2% with 1.4% of SAM. The Far North has the highest prevalence chronic malnutrition with 38.2%.

According to the Cadre Harmonisé, 7% of the population in the Far North are projected to be food insecure (phases 3 and 4) during the June to August lean season. Apart from Mayo Danay, where the food and nutritional situation of the population is good, all other

divisions are assessed under pressure. The indicators related to infant and young child feeding practices are among the poorest in the country, with an exclusive breastfeeding rate of 30.8%, a timely introduction rate for complementary foods of 33.3% and a low dietary diversity (dietary diversity score of 19.7% and minimum acceptable dietary intake of 32%). Indicators related to the early initiation of breastfeeding and diet diversity follow the same trends and highlight needs to reinforce knowledge and practices around young child feeding.

Internally displaced populations and host populations are the most exposed to the lack of access to drinking water, poor access to health care, hygiene problems, epidemics, and the consequences of poor harvests which can lead to rapid deterioration of their nutritional status. 56% of IDPs in the Far North have access to less than 15l / person / day.

North West and South West Crisis

In the North West and South West regions 90,000 people, mainly girls and boys under the age of 5 and pregnant or lactating women, will be vulnerable in terms of nutrition status. It is estimated that up to 40,000 boys and girls will be in need of treatment for acute malnutrition in 2020: 10,000 children who are suffering from severe acute malnutrition and some 30,000 children with moderate acute malnutrition.

For the North West and South West regions nutrition indicators have been integrated into the emergency food security assessment (EFSA) conducted in October 2019 and revealed proxy Global Acute Malnutrition (GAM) rates of 5.1% and 7.4% for the North West and the South West regions, respectively. Prior to the crisis, the two regions were already facing high levels of stunting and poor infant and young children feeding indicators.²¹ The proportion of children who meet their minimum acceptable diet remains extremely low at less than 30%.

The drivers of malnutrition deteriorated in 2019 and are expected to follow the same trend in 2020. Reduced food production, reduced prices in rural areas, increased prices in urban areas and decline in food consumption as a coping strategy adopted in most households have led to a substantial deterioration of food insecurity and household livelihoods in 2019. This has exposed IDPs and poor host populations in urban areas to poor living conditions and acute food

insecurity Crisis (IPC 3). Multi Sectoral Needs Assessment (MSNA) findings indicate a worrying WASH situation with over 55% not having enough water for their needs and more than 40% of the assessed communities practice open defecation. Health service delivery continues to be significantly affected by insecurity. The disease surveillance system is very weak putting the population at risk of epidemics with late detection and limited response capacity.

Central African refugee Crisis

In the regions affected by the Central African refugee crisis (East, Adamawa and North), more than 113,000 people, mainly girls and

boys under the age of 5 and pregnant or lactating women, will be vulnerable in terms of nutrition status. It is estimated that 93,000 children will need treatment for acute malnutrition amongst whom 30,000 boys and girls will suffer from severe acute malnutrition.

The results of the latest nutrition survey (with the SMART method) conducted in November 2019 by UNICEF and the Government of Cameroon showed GAM rates of 6.2% in the North, 3.8% in Adamawa and 5.5% in the East with 1.3%, 0.3% and 0.7% of SAM for the same regions respectively. For chronic malnutrition, the regions were in an alert situation with rates of 37.3% in the East and Adamawa and 34.9% in the North.

WOMAN

51%

CHILDREN

51%

WITH DISABILITY

15%

Overview

Availability of water, hygiene and sanitation services is a pressing concern in each of the three humanitarian crises Cameroon is facing. In addition, the country remains at risk of a large-scale cholera epidemic on top of the existing crises. Five of the country's 10 regions have been affected in the past two years, with the North, Far North and South West regions experiencing a cholera outbreak at the start of 2020. Acute humanitarian needs are compounded by a chronic lack of access to drinking water, weak supply infrastructure and an unsanitary environment.

Affected population

According to multisectoral assessments carried out in the main affected areas (Far North, North West and South West) and multisectoral rapid assessments, inventories of works and data from monitoring access to water, hygiene and sanitation services in the main sites, camps and host villages, an estimated figure of 1.9 million people are in need of humanitarian assistance for the provision of drinking water, basic hygiene and sanitation services.

A cholera epidemic declared in July 2018, was ongoing at the start of 2019 with a total of 2064 cases and 111 deaths recorded as of December 2019. 42% of cases and 57% of deaths were recorded in 2019 alone with a fatality of 5.4% in five regions. All other cholera-affected regions host displaced populations. Insecurity, poor access to drinking water and weak sanitation services constraint the response.

Far North Crisis

In the Far North region, the situation remains worrying for Nigerian refugees, IDPs, returnees and host populations regardless of the living environment (site, camp, host villages). All the main existing IDP sites (Kolofata, Meme, Zama) as well as the Minawao refugee camp have sub-standard water supply and/or basic sanitation. Investments made in previous years have saved many lives, but due to their insufficiency and discontinuity, it has become difficult to provide affected populations with a minimum standard of living ensuring their dignity, protection and healthy life.

In host communities, due to low investments, particularly in the basic sanitation sector, the situation has not changed significantly. The practice of open defecation remains common in the region. It is more prevalent among IDPs, off-site refugees and returnees (men,

women, girls and boys) than among host populations. Mayo Sava is the most affected division with at least 34% of the population who practice open defecation, including 80% of refugees outside camps (88% of refugee women) and more than 25% of IDPs. Also, in Mayo Tsanaga, there is a very high rate of open defecation (at least 26%) among refugees outside the camps. The highest proportion of people who share latrines is observed in Diamaré with 47.8% of households (63% of women and 37% of men) while in Mayo Sava this proportion is 35% including 41% among women and 31% among men (OCHA, 2018). This increases the risk of gender-based violence and undermines the privacy of women and men who use it. Water collection remains between 80% and 100% a distributed task, mainly carried out by women under the age of 59 and children (girls and boys under the age of 18) (MSNA 2018). This can have a negative effect on the productivity of women and the education of children. Access to drinking water, hygiene and adequate sanitation are not guaranteed in schools in the region. As an example, in Logone-et-Chari, more than half of public primary schools do not have access to a drinking water point while the need for school latrines is real. (End of school year report 2018/2019, Divisional Delegation of Basic Education of the Logone and Chari).

North West and South West Crisis

The ongoing conflict in the North West and South West regions has led to a deterioration in access to water supply, hygiene and sanitation services, including in certain localities in neighboring regions (case of certain localities of the Noun in the West region and Mayo Banyo in the Adamawa region). The main challenges that emerge from the needs assessment are insufficient, remote and derelict water points, the long waiting time, insufficient water transport and conservation equipment. In the North West region, at least 95% of the populations face one of these challenges. In the South West region except for the N'dian Division, at least 80% of the populations of other departments still face one of these challenges.

The main sanitation challenges are the unsanitary situation of latrines, the non-separation of latrines by sex in the sites of displacement of people in the bush, the lack of privacy, the large number of users per latrine, the insecurity in using latrines at night and open defecation. At least 90% of the populations surveyed in the two regions (except for the populations of the Fako, Kupe Manengouba and Ngo Ketunjia divisions) are confronted with one of these challenges. The most

affected divisions are Lebiale, Ndiang and Meme in the South West and Boyo and Mezam in the North West. Around 880,000 people (mostly host communities and IDPs) in the North West and South West need humanitarian assistance for the provision of drinking water, basic sanitation and hygiene because of this crisis.

Central African refugee Crisis

In the East, Adamawa and North regions hosting Central African refugees, low funding levels and a lack of significant investment have resulted in a precarious situation in terms of access to drinking water, hygiene and sanitation services. Minimum standards for water supply, basic sanitation and waste management are not met in 2/3 of the existing refugee sites. Another category of people in need of humanitarian assistance are individuals living in communities hosting Central African refugees and without any infrastructure for supplying drinking water, which pushes communities to drink water from

surface and from unimproved sources. This situation of insufficient or absent water points within and outside refugee sites mainly affects women, girls and boys who are responsible for collecting water in households and increases the risk of the cholera epidemic.

Three key figures

- 82% (9/11) of the sites for refugees and displaced persons do not provide basic drinking water and sanitation services at the minimum level required by the reference standards.
- Since July 2018, the ongoing cholera epidemics affected 5 regions out of the 10 in Cameroon with a total of 2,064 cases and 111 deaths and a lethality of 5.4% as of December 2019.
- On average, 80% of people in the various divisions of the West and South West regions face a major challenge in accessing drinking water and sanitation services.

Shelter & NFI

PEOPLE IN NEED

791k

WOMAN

51%

CHILDREN

51%

WITH DISABILITY

15%

Overview

Critical shelter needs remain prevalent throughout the country. The destruction of houses and villages in certain conflict zones continues to cause further displacement, with people seeking refuge in remote areas. Children, women and the elderly are most affected. However, the provision of shelter support has remained difficult.

Far North Crisis

In the Far North, insecurity, the effects of climate change, a lack of plant cover, rains with strong winds all negatively affect the health and dignity of the population. Internally displaced people, returnees, out-of-camp refugees and host populations who are vulnerable due to insufficient resources, food and livelihoods, are priority groups in need of basic shelter and household items. The sector will place a particular focus on the provision of rapid shelter and NFI response to new population movements.

North West and South West Crisis

Most of the displaced population currently live in rural areas with critical needs in terms of shelter and non-food items. While the

internally displaced are the most exposed to environmental and man-made risks, special attention must also be paid to the vulnerable host families coping with high pressure on already limited resources they share. IDPs living with host families who can no longer sustain them are forced to move again and settle in rural areas. Most people have not only lost their homes but also their main sources of income, severely limiting housing options. Moreover, rental contracts are usually not official placing displaced people at high risk of eviction.

Central African refugee Crisis

In the East, North, and Adamawa regions, needs are largely related to the level of economic vulnerability. The majority of the displaced have arrived in their current areas of livelihood without any means of subsistence, and it is with humanitarian aid that they have been able to obtain shelter and household items to cope with an austere life. In a context where refugees cannot easily find employment, given the localities in which they live and which lack daily economic activities, they rely heavily on humanitarian aid for their basic needs.

3.8

Early Recovery

PEOPLE IN NEED

1.8M

WOMAN

51%

CHILDREN

50%

WITH DISABILITY

15%

Overview

1.8 million people across the country need support in terms of early recovery, including in particular internally displaced populations,²² Nigerian and Central African refugees and their host communities and returnees. Needs have increased in 2019 as the upsurge in violence and the consecutive increase in displacement have resulted in considerable loss of sustainable livelihoods for populations who were previously in a process of building their resilience.

The poverty rate for the Far North region stands at 74.3% compared to a national average of 37.5%. The literacy rate is almost half in the North and East regions (43%) compared to the rest of the country (72%). The ratio of health workers to the total population is almost double in Far North and North (1,170 and 1,798 respectively) compared to the national level of 579. Rates of unemployment are equally alarming. The current humanitarian emergencies aggravate these chronic vulnerabilities. The youth is particularly affected by the lack of perspective which in turn generates resentment towards traditional authorities and institutions.

Far North Crisis

Population movement has resulted in an increased demand on basic social services and sustainable livelihoods. Returning populations require economic assistance to facilitate their reintegration. More than 800 former members of Boko Haram recently interviewed express a considerable need for psychosocial care, socio-professional capacity building and support for economic recovery. Affected households as well as people displaced by the Boko Haram attacks

are also in need of assistance in restoring their purchasing power to opt for goods and services. It is essential to put in place a strategy to revitalize local economies and provide assistance in income-generating activities for households and individuals affected. The development of early warning systems to prevent and mitigate the impact of disasters is also planned for the year 2020.

North West and South West Crisis

The early recovery needs of people affected by the crisis are threefold: access to temporary employment opportunities for youth and women, access to vocational training for youth, and access to a minimum of basic services. The destruction of health centres and other public infrastructure has increased the vulnerability of the target population. Governance issues and more specifically the rule of law remain a major concern. The justice system is weak, inter alia, due to difficulties in accessing justice services.

Central African refugee Crisis

Access to social services and economic activities for refugee populations are limited. Agropastoral conflicts between the Fulani and Gbaya groups are on the rise and sometimes oppose refugee populations against host communities. Access to land remains contentious. In addition, conflicts between farmers and pastoralists who migrate to the region have worsened as a result of changes in transhumance corridors induced by climate change and insecurity. The security crisis has also affected economic activities as traders, herders and some economic operators in the region have fled.

Data Sources

The data used to define people in need originate from different databases, surveys and needs assessments. The methodology used for the collection of the data is reliable and uncontested by the humanitarian community in Cameroon, overseen by the HCT.

The data sources used for the HNO and HRP are as follows:

- Data projected from the 2002 census as carried out by the National Institute of Statistics
- The number of refugees is provided by the UNHCR ProGres database.
- The number of IDPs and returnees was collected by IOM in DTM round 18 in the Far North, and through the MSNA carried out in August 2019 in the North West and South West regions and the MIRA carried out in August 2019 in the Adamawa region and in October 2019 in the Littoral and West regions.
- Host population figures are calculated using a method previously adopted by UNHCR to identify host populations hosting refugees. This methodology was adopted globally for populations hosting displaced people.
- Data on people in food insecurity situation is based on the Cadre Harmonisé analysis, the Food Security Monitoring Systems and the national survey on food and nutrition security, validated by the Ministry of Agriculture of Cameroon.
- Data on people in need of health and nutrition assistance are extracted from the Health Information Management System managed and maintained by the Ministry of Health of Cameroon.
- Additional data on nutrition were collected through the following surveys: Standardized Monitoring and Assessment of Relief and Transition (SMART), Multiple Indicator Cluster Survey (MICS), and Demographic and Health Surveys (DHS).

South West	0	3	2	3	1	4	3	3	21	1	1	33

- Data on people in need of protection is collected through protection monitoring tools managed by UNHCR and its partners.
- Data used to assess the need for shelter and household items was collected through sectoral assessments carried out by UNHCR and its partners, as well as the 2018 and 2019 multisectoral MSNA assessments.
- Data used to define children in need of child protection was extracted from the UNHCR ProGres database and is also based on expert analysis.
- Data on people in need of protection from GBV is collected and gathered in the DHS and the GBVIMS database maintained by UNFPA.
- Data used to define the number of people in need of WASH assistance was collected through the MSNA conducted in the Far North in 2018 and in the North West and South West regions in 2019, as well as through the sectoral assessment conducted by WASH Sector actors led by UNICEF in 2018.
- Data used to estimate the people in need of Early Recovery assistance is based on data collected by INSO, UNDSS, DTM and MEB.

It should be noted that the average frequency of updating these sectoral data is six months. It is therefore possible to update the overview of humanitarian needs in Cameroon every six months.

Methodology

In 2019, the humanitarian community in Cameroon engaged in the enhanced Humanitarian Programme Cycle (HPC) approach to further improve the accuracy of people in need (PIN) estimated for 2020. The HNO for 2020 more accurately identifies people with acute need by looking at both the criticality (i.e. categorization of needs by types of humanitarian consequences) and the severity of needs (i.e. estimation of severity of the consequences through a five point-scale). The methodology was validated by the Inter-Sector Group (ISG) and the HCT.

The humanitarian consequences reflect direct outcomes of the crises on people's lives and survival (physical and mental well-being) and on people's livelihoods and ability to achieve minimum self-sustenance (living standards). The analysis of consequences also included the ability of people to withstand future shocks and stresses (resilience).

The main purpose of centering the analysis of needs on distinct types of humanitarian consequences and severity is to better inform prioritization during the Humanitarian Response Plan (HRP) development phase - by establishing the time criticality associated with physical and mental well-being (at its most severe, people facing death or irreversible harm) and other conditions that will also have to be addressed and warranting an additional layer of prioritization such

as living standards (basic needs that need to be met in order to not lead rapidly to life-threatening consequences).

The analysis by humanitarian consequences brought greater homogeneity across sectors on the way the effects of a crisis on people's lives and livelihoods were identified, as opposed to each sector interpreting needs in very distinct ways.

Given the methodological shift, a degree of cautiousness should be exercised when comparing trends across years.

Inter-sectoral severity and PIN estimations

The ISG at capital level, in consultation with the inter-Sector and inter-Cluster groups at regional levels, supported by the Information Management Working Group (IMWG), completed the following steps:

- Defined and agreed on the scope of the analysis (population groups, geographic areas)
- Assigned needs indicators to humanitarian consequences for PIN estimation by severity

The process included:

1. Joint selection of needs indicators to illustrate the different dimensions and aspects of each humanitarian consequence based on:

(a) indicator appropriate and relevant to explain the consequence; (b) data for the indicator available and reliability, with possibility to organize findings on the five-point severity scale; and (c) information collected available at division level.

2. The choice of indicators took into account the following criteria:

- **Relevance:** Clear link between the indicator and the relevant humanitarian consequence.
- **Accuracy:** The indicator measures what it intends to measure.
- **Coverage:** the indicator is measurable at the sub-divisional level for the general population and at the divisional level for IDPs, returnees, host communities and others.
- **Non-correlation:** Indicators are not redundant; each indicator measures something that has not been taken into account by another indicator.

3. Severity was determined at the divisional level. For each humanitarian consequence, a combination of indicators was chosen to produce a severity map. These indicators were combined to produce the global severity map. Thresholds used varied from 1 to 5 depending on the severity in the division. The threshold per division was determined according to the below rules:

- For the Food Security indicators for the physical and mental well-being consequence the severity thresholds of the Cadre Harmonisé were used.
 - For the other indicators the Sectors identified the different severity thresholds.
 - The Needs Comparison Tool (NCT) was used for the intersectoral severity maps.
4. Data was collected at division level to ensure coherence at the analysis level. Certain sectors such as nutrition and health which collect data at the level of health zones submitted data at regional level and were projected at division level.
5. Agreement that the inter-sectoral model is based on three humanitarian consequences—well-being, living standards, and recovery and resilience. Considering the nature of protection needs, the ISG decided to include protection indicators under the well-being consequence.

The HCT was briefed on a regular basis and endorsed the scope and methodology of the analysis.

- In parallel, OCHA prepared the humanitarian profile (or base population), using IOM-DTM figures, MSNA, MIRA, UNHCR ProGres data and the population projection statistics provided by the National Institute of Statistics.
- In 2019 data collection was heavily based on recent assessments. The indicators used for the PIN calculation are based on MIRA and MSNA data (MSNA Far North, December 2017, MSNA North West and South West, August 2019, MIRA Adamawa, July 2019, MIRA West and Littoral, October 2019, MIRA Yaoundé (Center), November 2019) and on UNHCR data for refugees, as well as data from the SMART from November 2019 and the Cadre Harmonisé published

in December 2019. Furthermore, other data sources include the DTM carried out in the Far North, the refugee database ProGres, and the Protection Monitoring data base. In comparison to previous years, there was less reliance on expert judgement.

- OCHA estimated people in need by selecting the highest percentage from among those households categorized to be in severity 3, 4 or 5 by population group (IDPs, returnees, refugees, host community), by humanitarian consequence and by division. The resulting percentages were applied to the baseline population for that location.
- For the current HPC, the acute severity of needs is established at divisional level along three humanitarian consequences (well-being, living standards and recovery and resilience). Protection risks, which include torture, arbitrary arrest and killings, are captured under the well-being consequence.
- The methodology assumes that people facing physical and mental well-being problems will also face living standards problems. The larger group of people affected by recovery and resilience problems are beyond the scope of a purely humanitarian intervention.
- The summary of people in need by consequence was validated at the ISG. The final HNO dataset will be available on HDX.
- The number of IDPs and returnees are based on IOM DTM, MSNA and MIRA data. The refugees are based on UNHCR data. This data does not account for pendular displacement in the North West and South West regions.
- Throughout the document, a focus is placed on the well-being PIN and acute severity to explain the inter-sectoral needs and severity by humanitarian consequence.

Cluster PIN and severity estimations

For the current cycle, sector/cluster estimations were entirely based on the indicators and thresholds used in the inter-sectoral framework. When available, sector/clusters referred to own data sources, and expert judgement, to inform the broader analysis.

To support the enhancements in the HNO 2020, all Sectors/Clusters were able to reorient their core needs indicators and redefine thresholds to estimate severity of the consequences of the crisis on a five-point scale and, thereafter, derive the people in need according to the enhanced HPC inter-sectoral methodology.

Conclusions

Provided that assessment data is available at a minimum at divisional level in all affected locations, the new methodology allows a collective understanding of the severity of needs and greater accuracy in estimating when emergency levels are being reached by vulnerable groups. As with any new methodology, further adjustments may be required to ensure an even sharper analysis. In 2020, the humanitarian community in Cameroon will need to invest additional time and resources on data collection and further improve the accuracy of the severity of needs. The indicators used to calculate sectoral and inter-sectoral PIN and severity are listed in Annex 1. The HNO dataset will be available on HDX.

Information Gaps and Limitations

In order to assess the humanitarian needs of the population of Cameroon, data was gathered through assessments conducted in 2018 and 2019 such as the MSNA and the MIRA.

Most sectoral evaluations are carried out on an annual basis (EFSA, JAM, Cadre Harmonisé, etc.) which limits the availability of timely up to date data. Differences in the way data is collected geographically also presents a further challenge. For example, the health and nutrition sectors collect data by health zone rather than by divisions. To harmonize, the data for these two sectors was provided at the regional level and then

projected at the divisional level.

Several sectors experience difficulties collecting primary data due to access constraint and accessing secondary data due to the lack of an assessment registry. To address this, the capacity of local actors to conduct evaluations according to humanitarian standards will be further strengthened alongside the systematic exchange of data and evaluation reports among humanitarian actors. Multi-sectoral as well as sectoral assessments carried out need to pay more

attention to gender specific needs and the needs of persons with disabilities. In the second half of 2019, efforts have been undertaken to make the MIRA more gender sensitive.

The absence of a recent general population census means that calculations for the PIN at times relied on projections.

End Notes

- 1 106,761 refugees from Nigeria (UNHCR, October 2019); 110,574 returnees (IOM DTM from August 2019); 270,870 IDPs (IOM DTM from August 2019)
- 2 450,268 in NWSW (MSNA, August 2019) ; 5,300 in Adamawa (MIRA, July 2019) ; 200,189 in Littoral and in the Western part (MIRA, October 2019) ; 23,640 in Yaoundé, Center (MIRA, November 2019)
- 3 51,723 registered refugees from Cameroon (UNHCR, December 2019)
- 4 The country ranked 141st out of 189 on [UNDPs 2017 Gender inequality index](#)
- 5 IOM DTM, round 19 (12-25 August 2019)
- 6 This is a decrease from 4.3 million people in need in 2019. However, this decrease is not a reflection of a decrease in needs, but of a change in the methodology on how to calculate the people in need.

- 15 EFSA, [Jan 2019](#)
- 16 Given the nature of the emergency, lifesaving GBV services include at minimum GBV case management (Psychosocial support), Health care including clinical management of rape, Livelihood support, Safe Shelter
- 17 According to the 2018 report of the Ministry of Basic Education, the student/teacher ratio in the Far-North region is 127 children per teacher
- 18 The results of the Cadre Harmonisé analysis, carried out in October 2019, with a projection to June-August 2020, are used to determine those in need. The population in Phases 3 to 5 is identified as being in need of food assistance. On the basis of EFSA's findings, a proportion of the people in phase 2 at divisional level is added to the overall calculation of those in need.
- 19 MINSANTE [SitRep 16 South West](#).
- 20 MINSANTE [Sitrep 171 Nord](#), MINSANTE [Sitrep 16 South West](#), MINSANTE [Sitrep 20 Far North](#).
- 21 Stunting prevalence of 36% in the North West and 28% in the South West (MICS 2014) and exclusive breast-feeding rates of 42.5% in the North West and 58.3% in the South West.
- 22 IDPs: 108,714; Nigerian and Central African refugees: 292,863 and host communities; Returnees: 110,574
